Social Media-Learning Platform

Aim and objective:

This project aims at building a social media-learning platform to give the user the ability to manage their learning road with the perfect road map which suitable to their requests by letting the users share their experiences. Through this application, we aim to help individual learners or teachers to start their careers in a successful and informative way, after collecting user information and start recommending the most useful courses depending on user knowledge.

Features:

1.User information page(profile)
2. User editable information
3. Recommendation system depending on user knowledge
4. Feed page for experiences and course sharing
5. Learn page to specify learner courses
6. Test page for user skills testing
7. Code page for most common codes used in the programming field
8. The ability to earn badges and points depending on user progress

Technologies:

Full responsive UI(not completed yet):

1-HTML
2-CSS3
3-Font Awesome library
4-Normlize Library

Completed prototype Pages :

1-Sign up page
