

Social Media-Learning Platform

Aim and objective:

This project aims at building a social media-learning platform to give the user the ability to manage their learning road with the perfect road map which suitable to their requests by letting the users share their experiences. Through this application, we aim to help individual learners or teachers to start their careers in a successful and informative way, after collecting user information and start recommending the most useful courses depending on user knowledge.

Features:

1. User information page(profile)
2. User editable information
3. Recommendation system depending on user knowledge
4. Feed page for experiences and course sharing
5. Learn page to specify learner courses
6. Test page for user skills testing
7. Code page for most common codes used in the programming field
8. The ability to earn badges and points depending on user progress

Technologies:

Full responsive UI(not completed yet):

- 1-HTML
- 2-CSS3
- 3-Font Awesome library
- 4-Normlize Library
- 5-javascript

Completed prototype Pages :

1-Sign up page

3-Feeds Page :

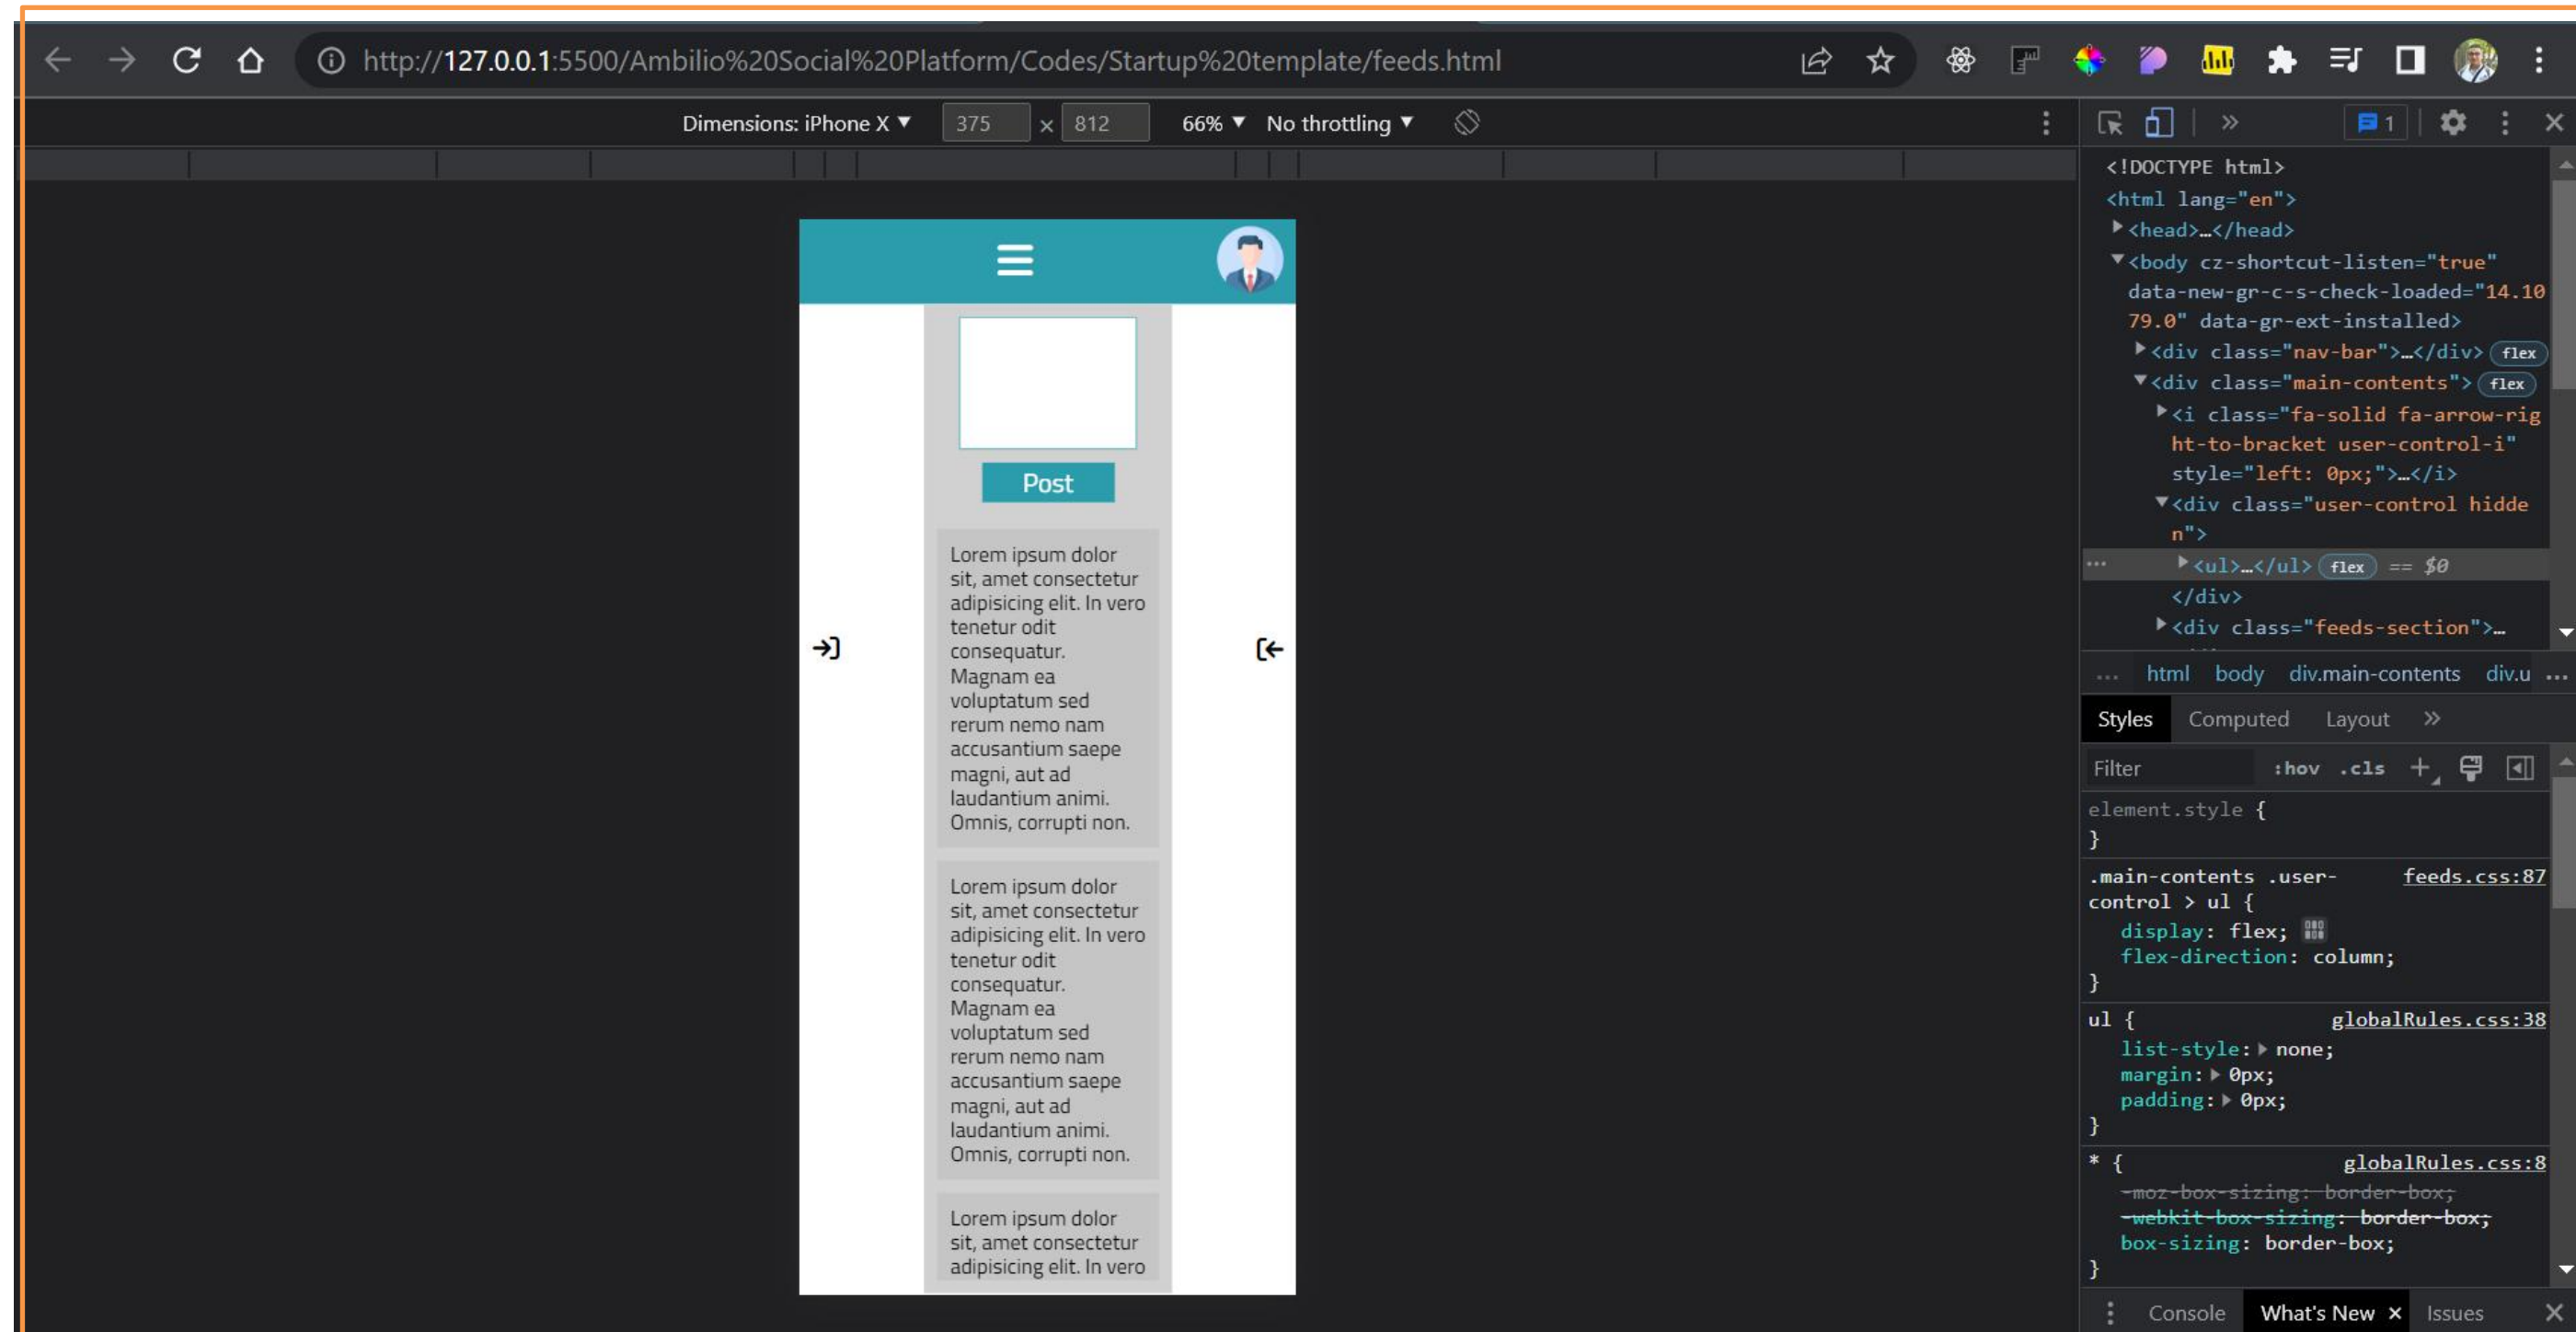

Overview on large screens :

Demo posts with ability to scroll down only for feeds part just like Linked-In

Overview on small screens :

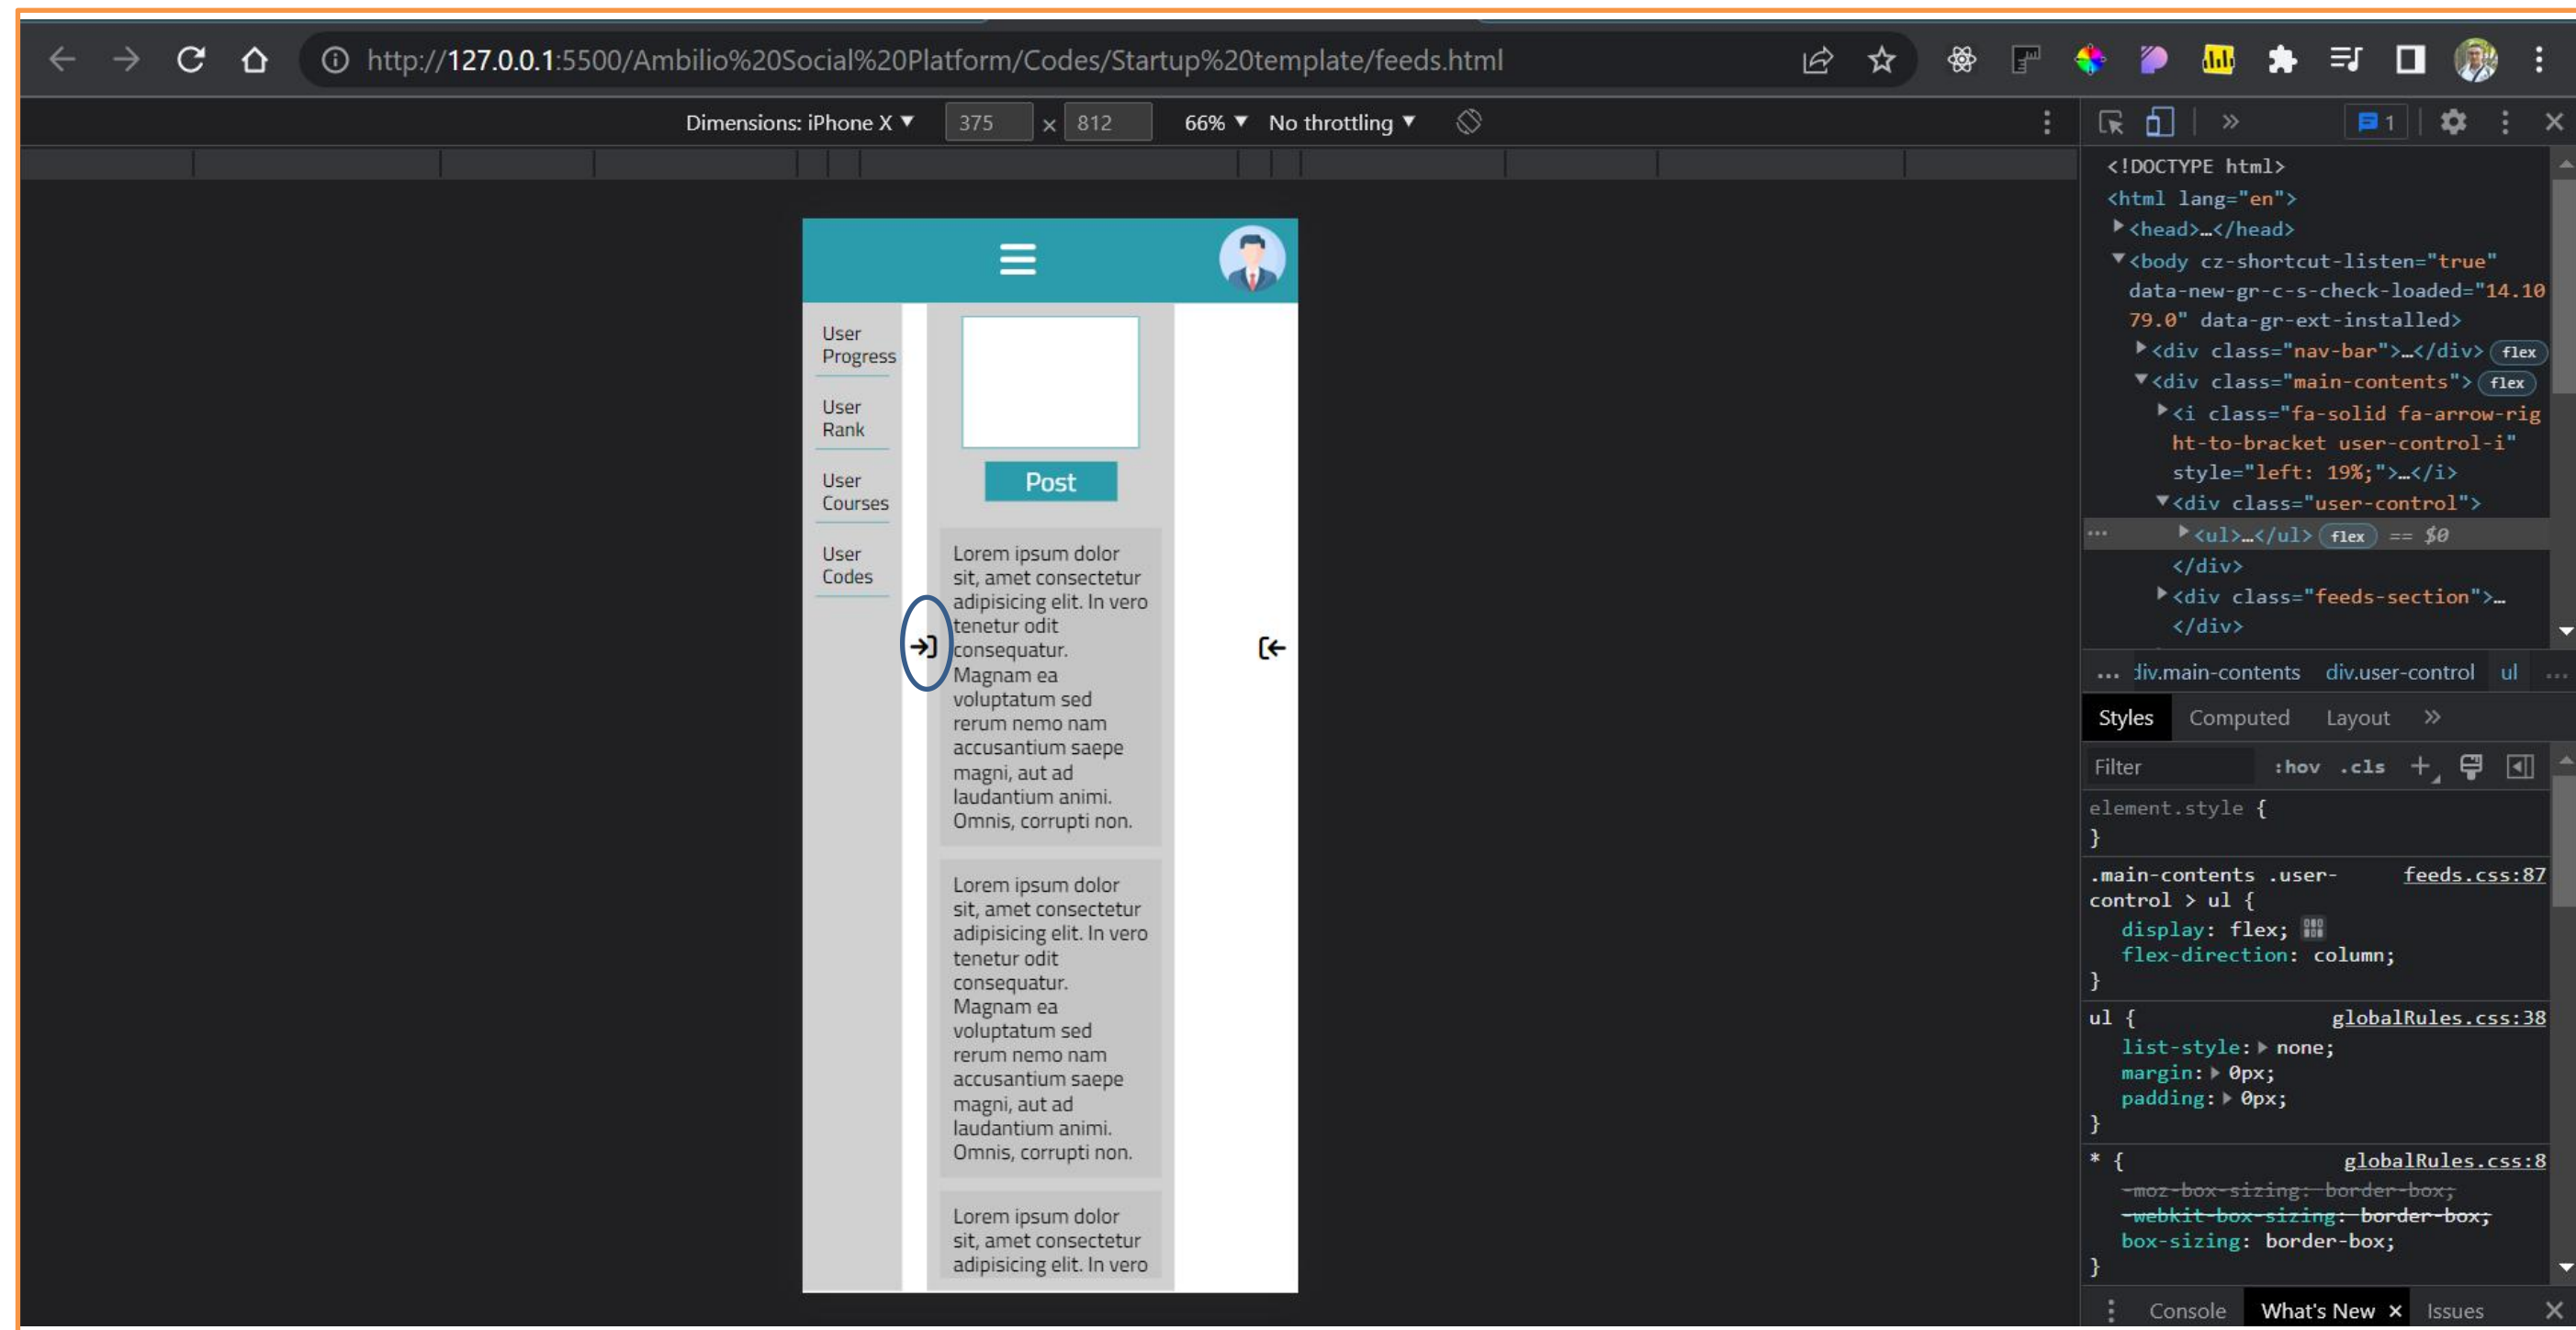

For Example Iphone X :

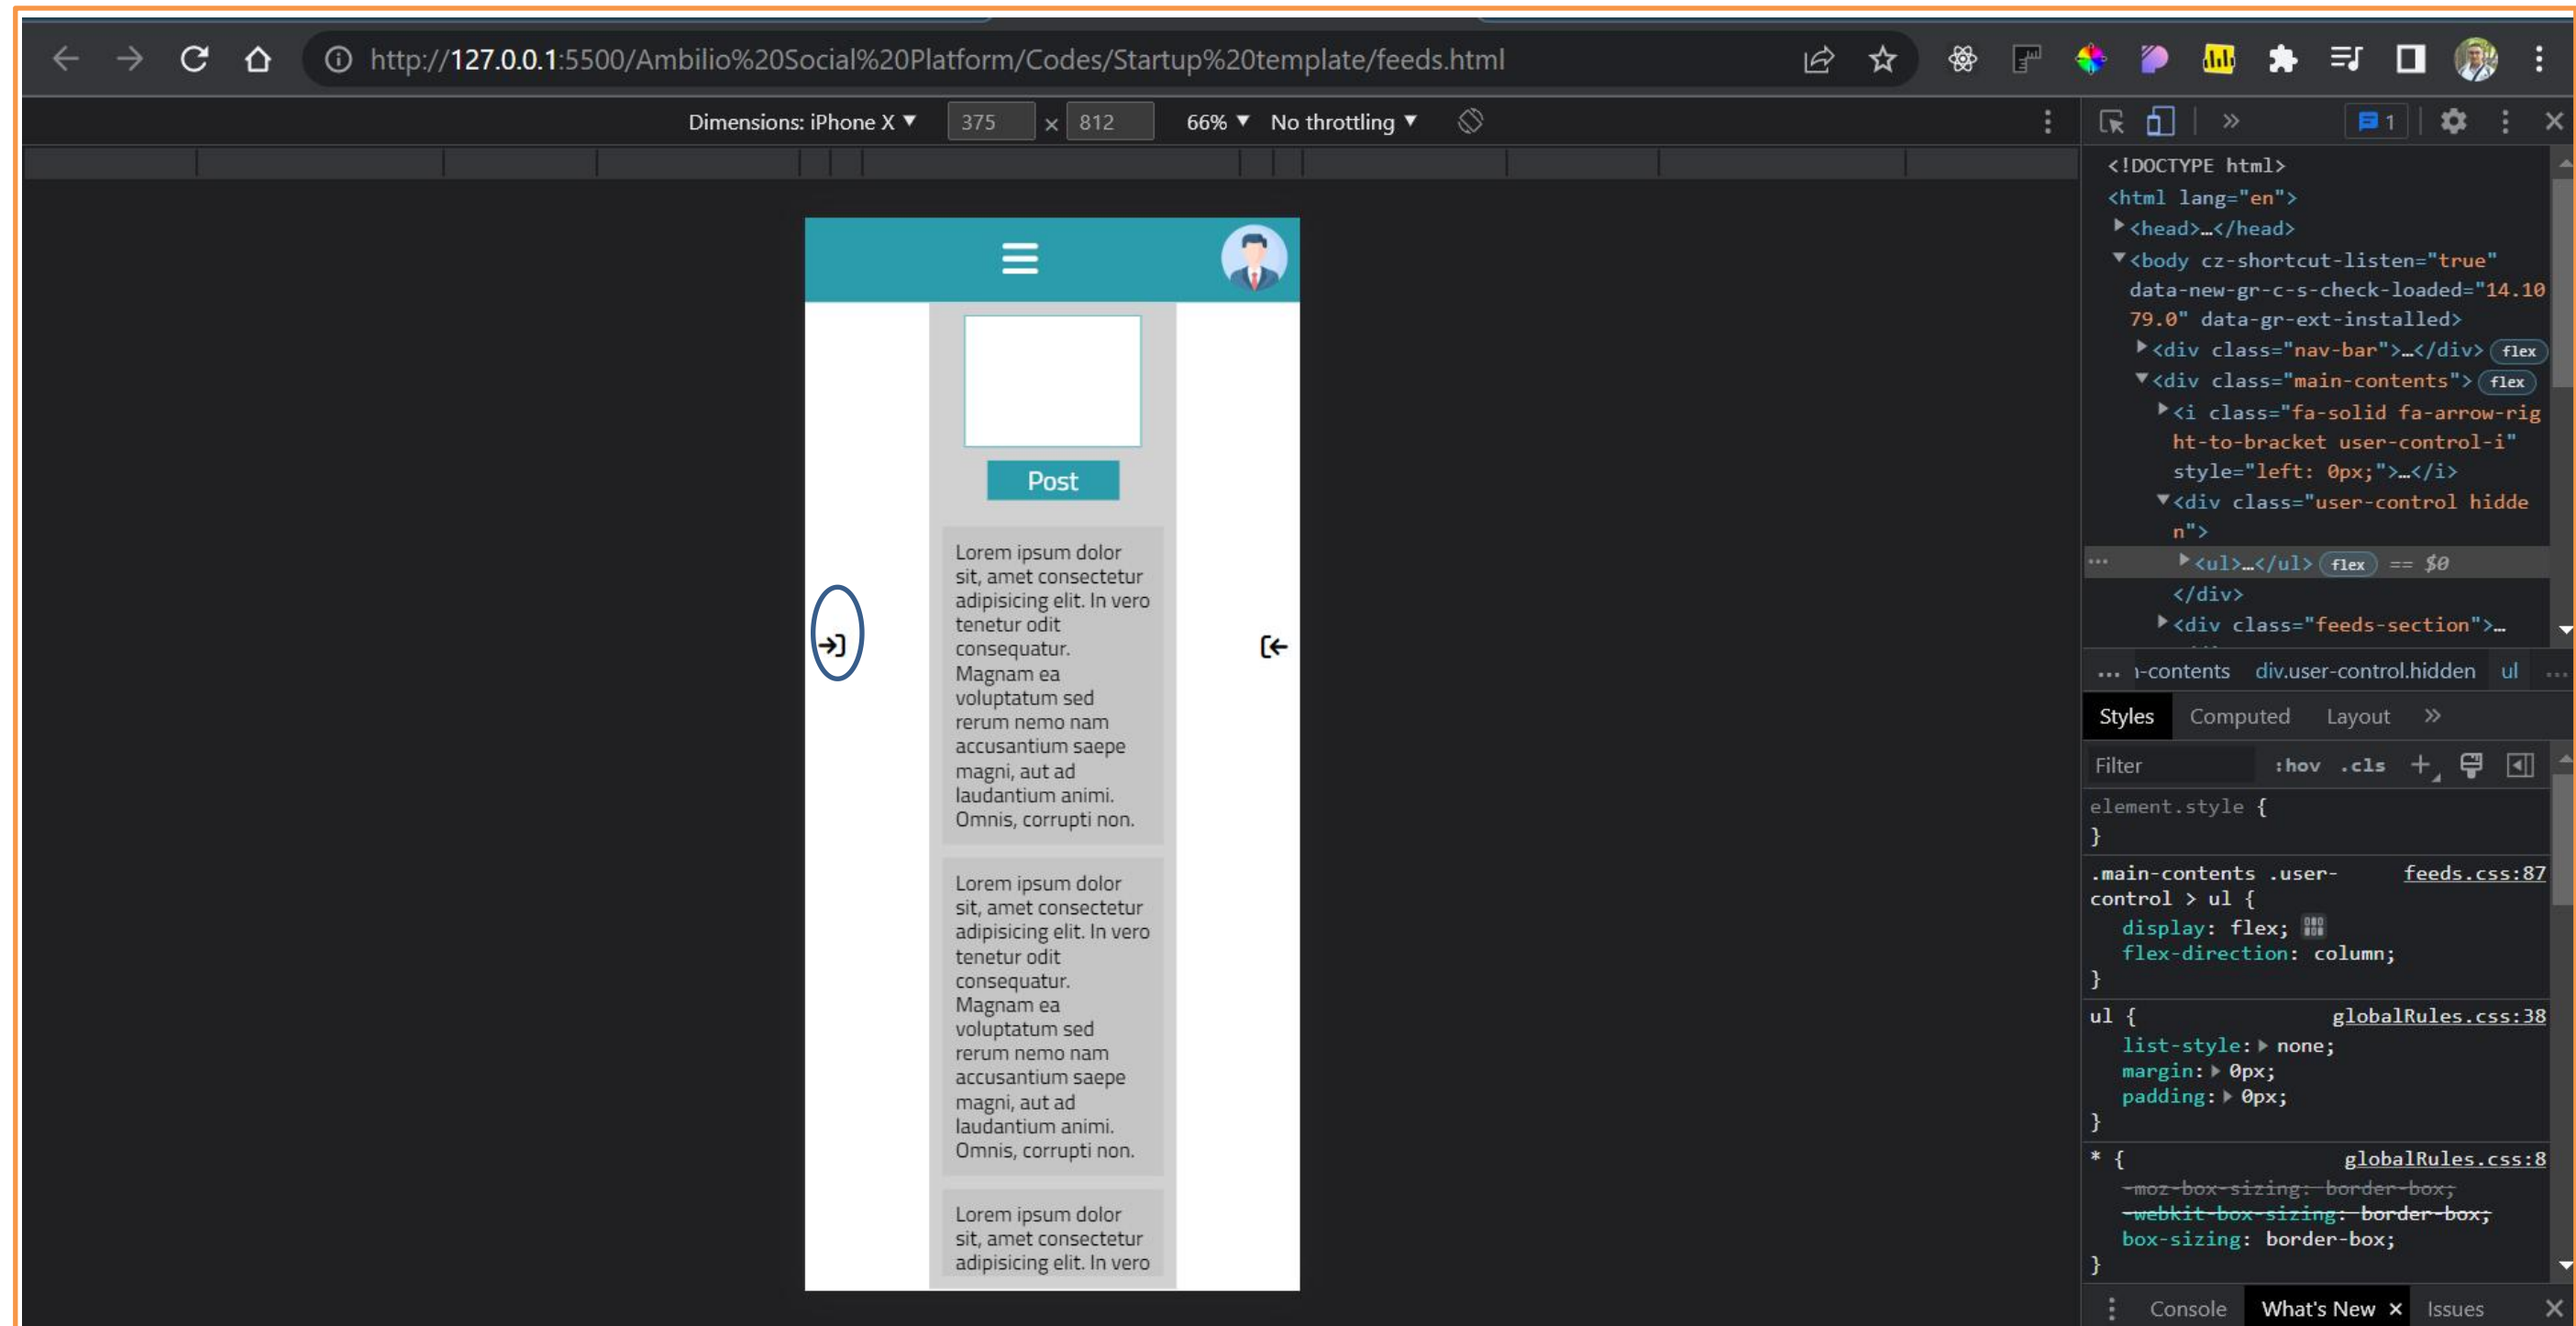

JavaScript functionality in feed page :

1-On click on the left arrow :

If the User control panel is hidden :

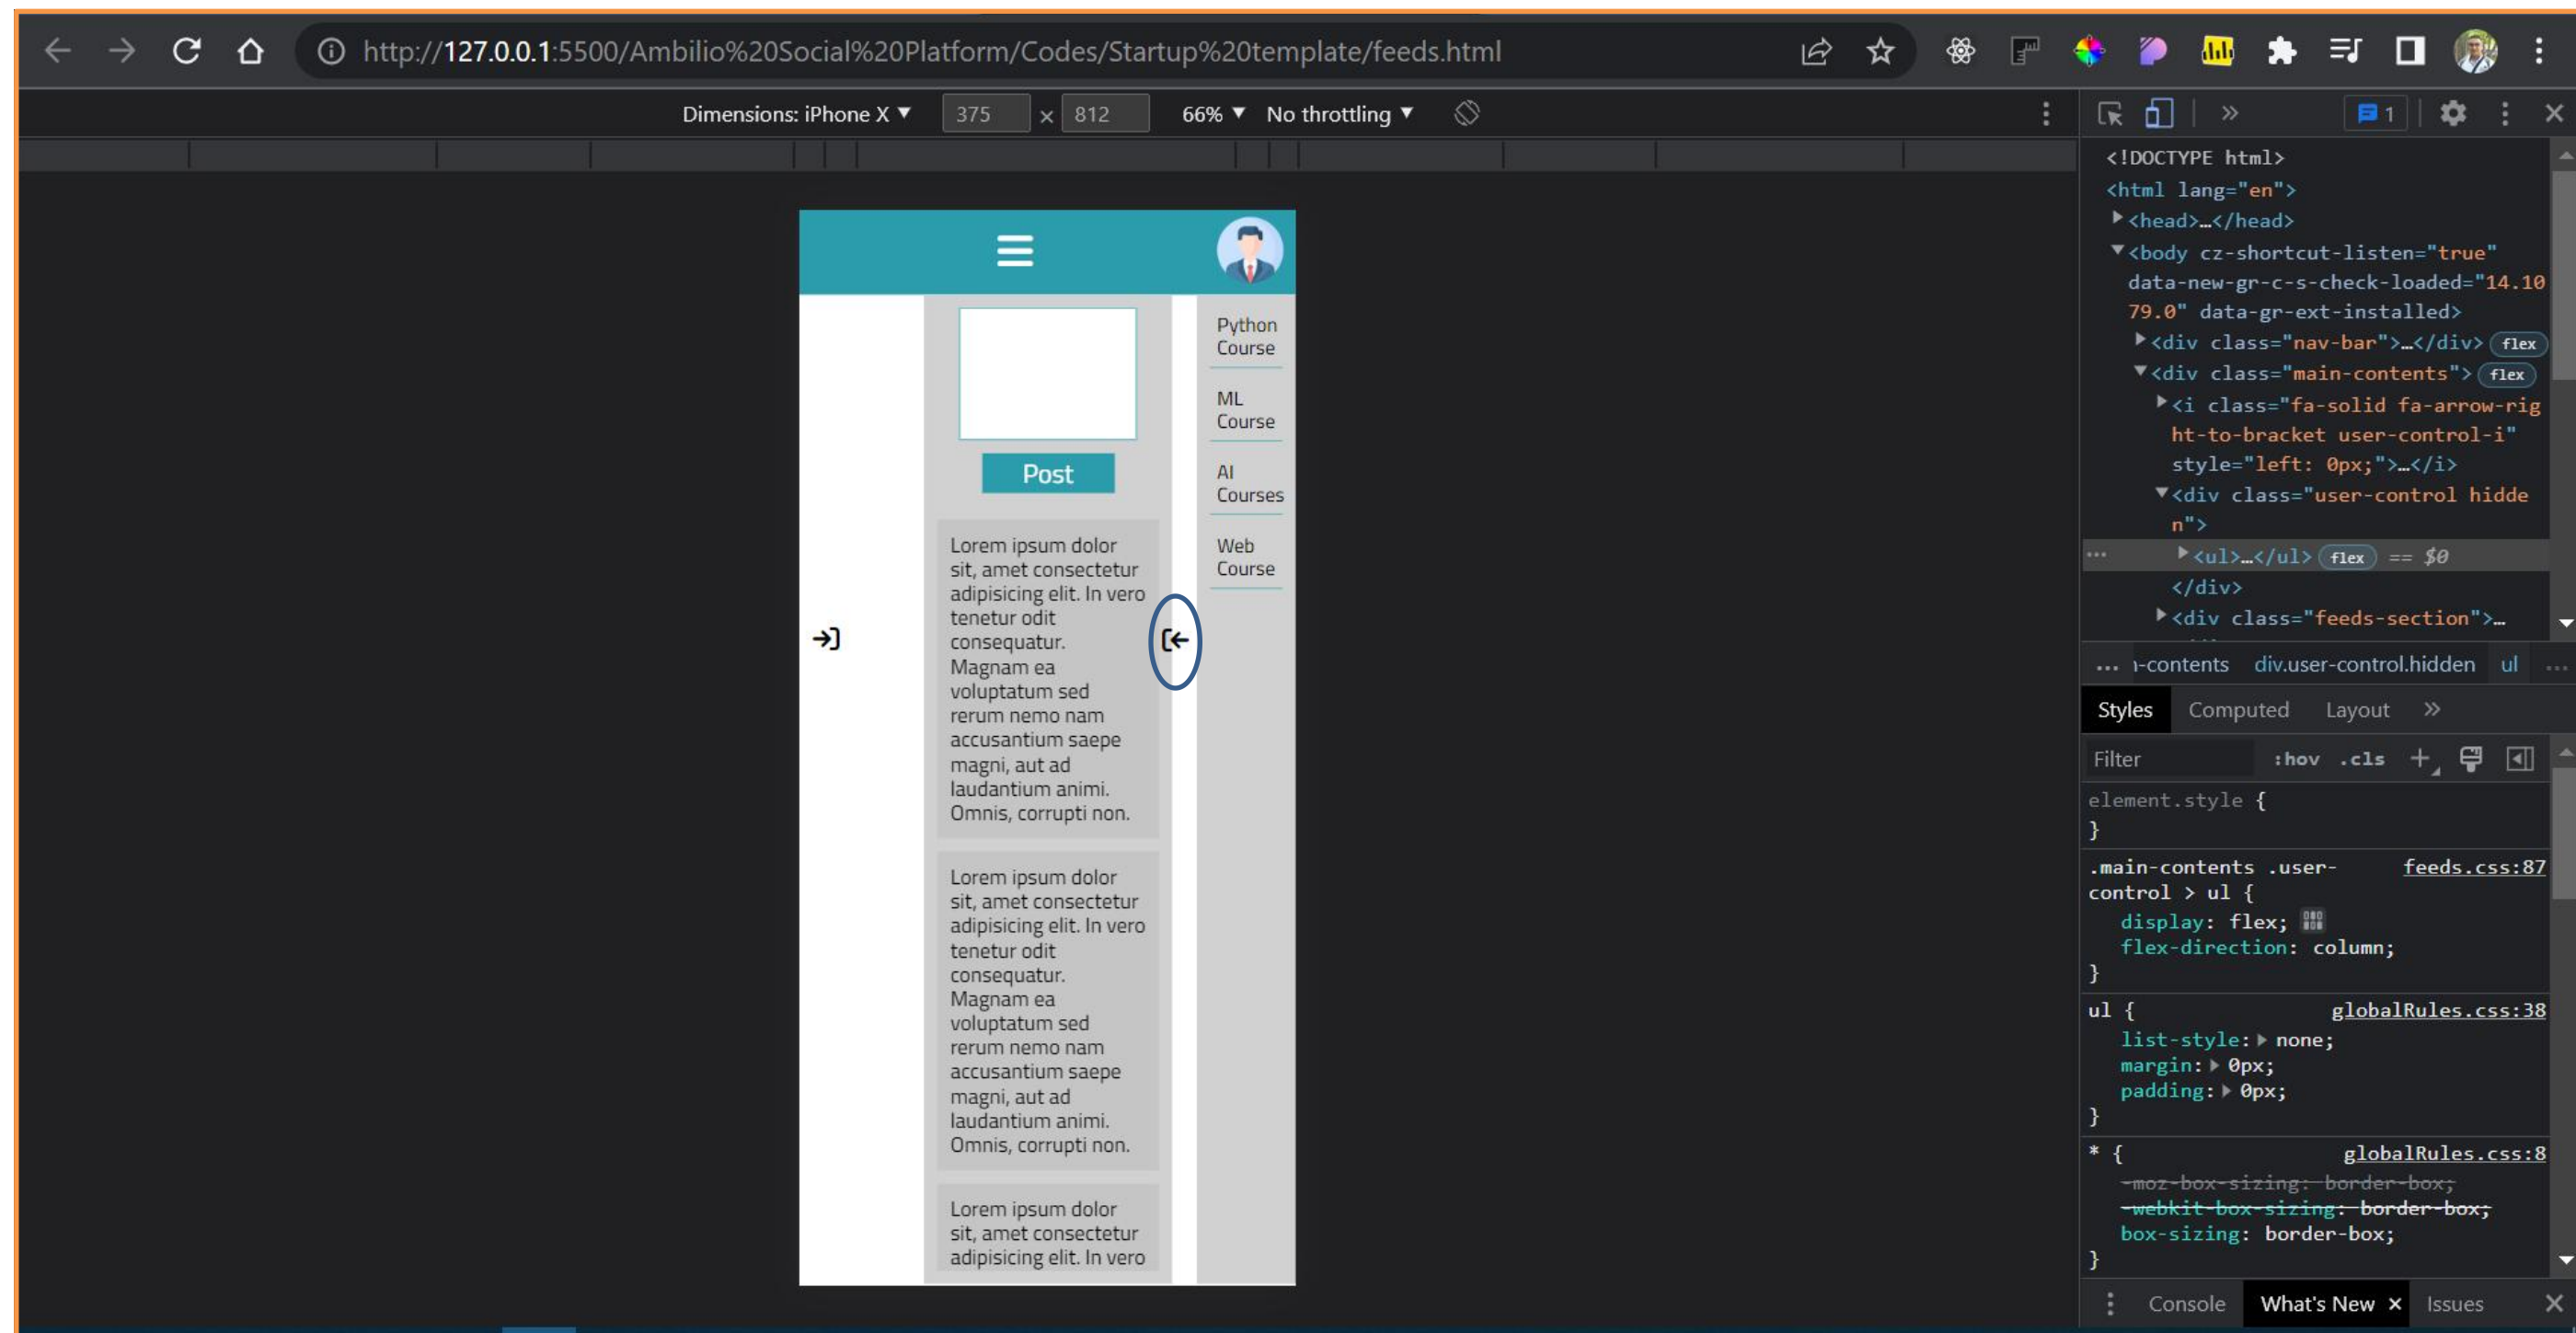

If the User control panel is not hidden :

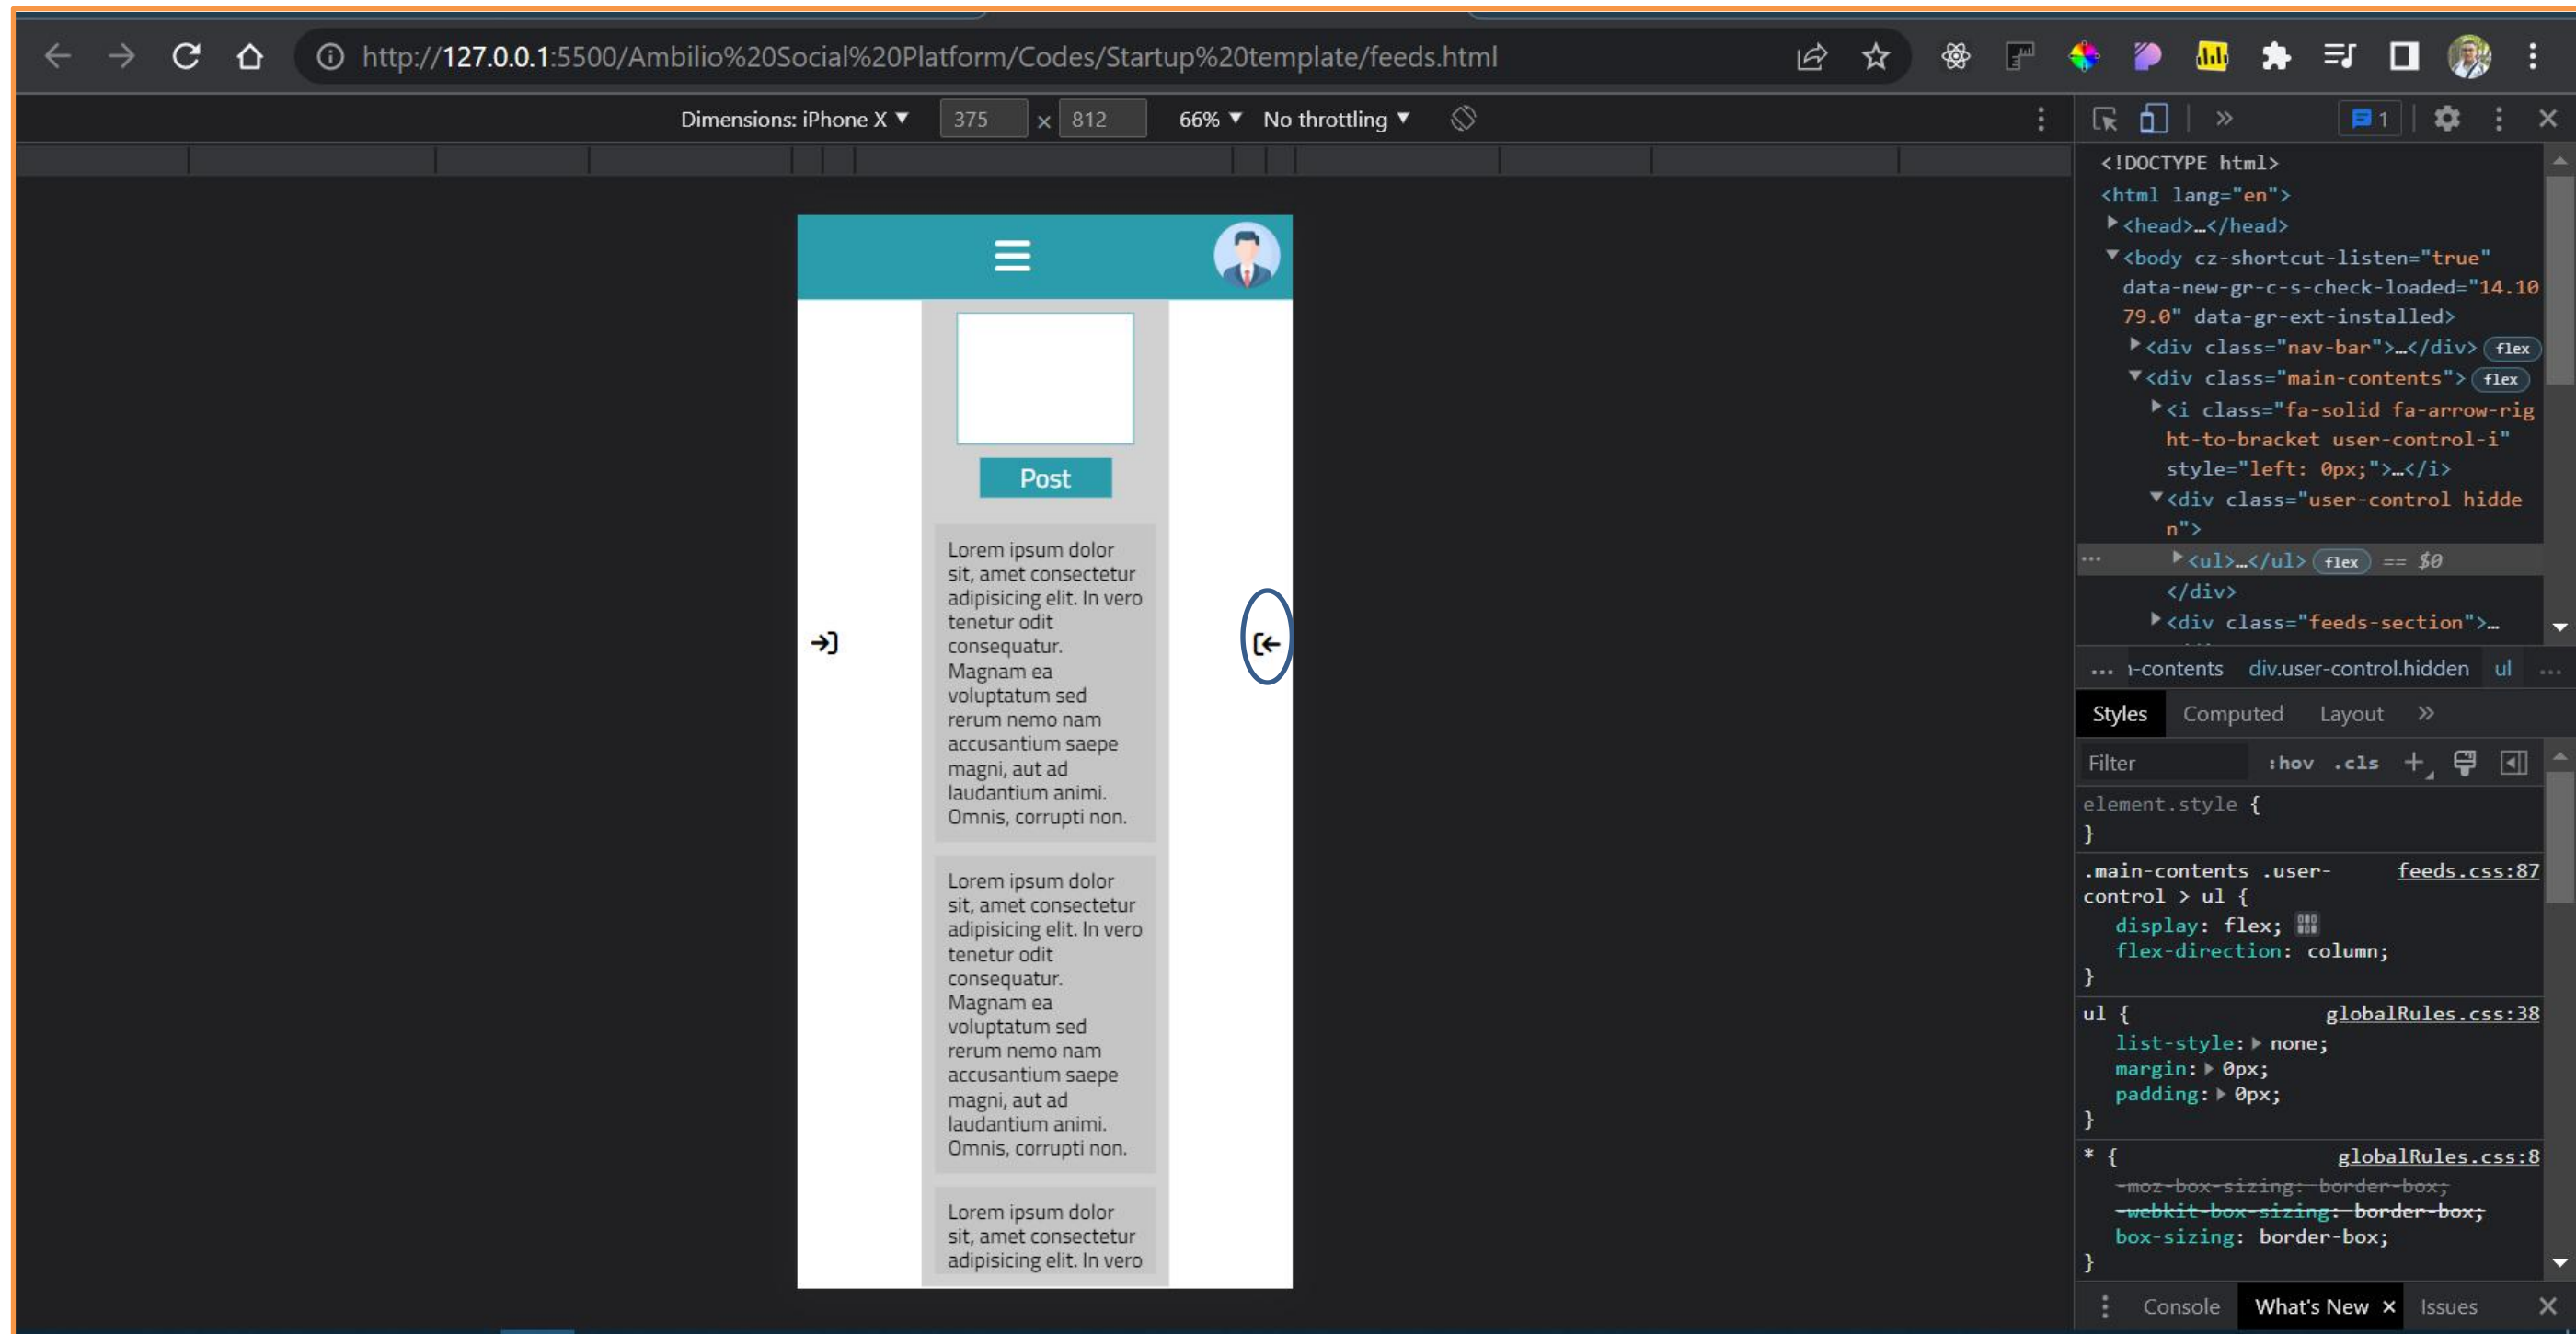

2-On click on the right arrow :

If the Recommended panel is hidden :

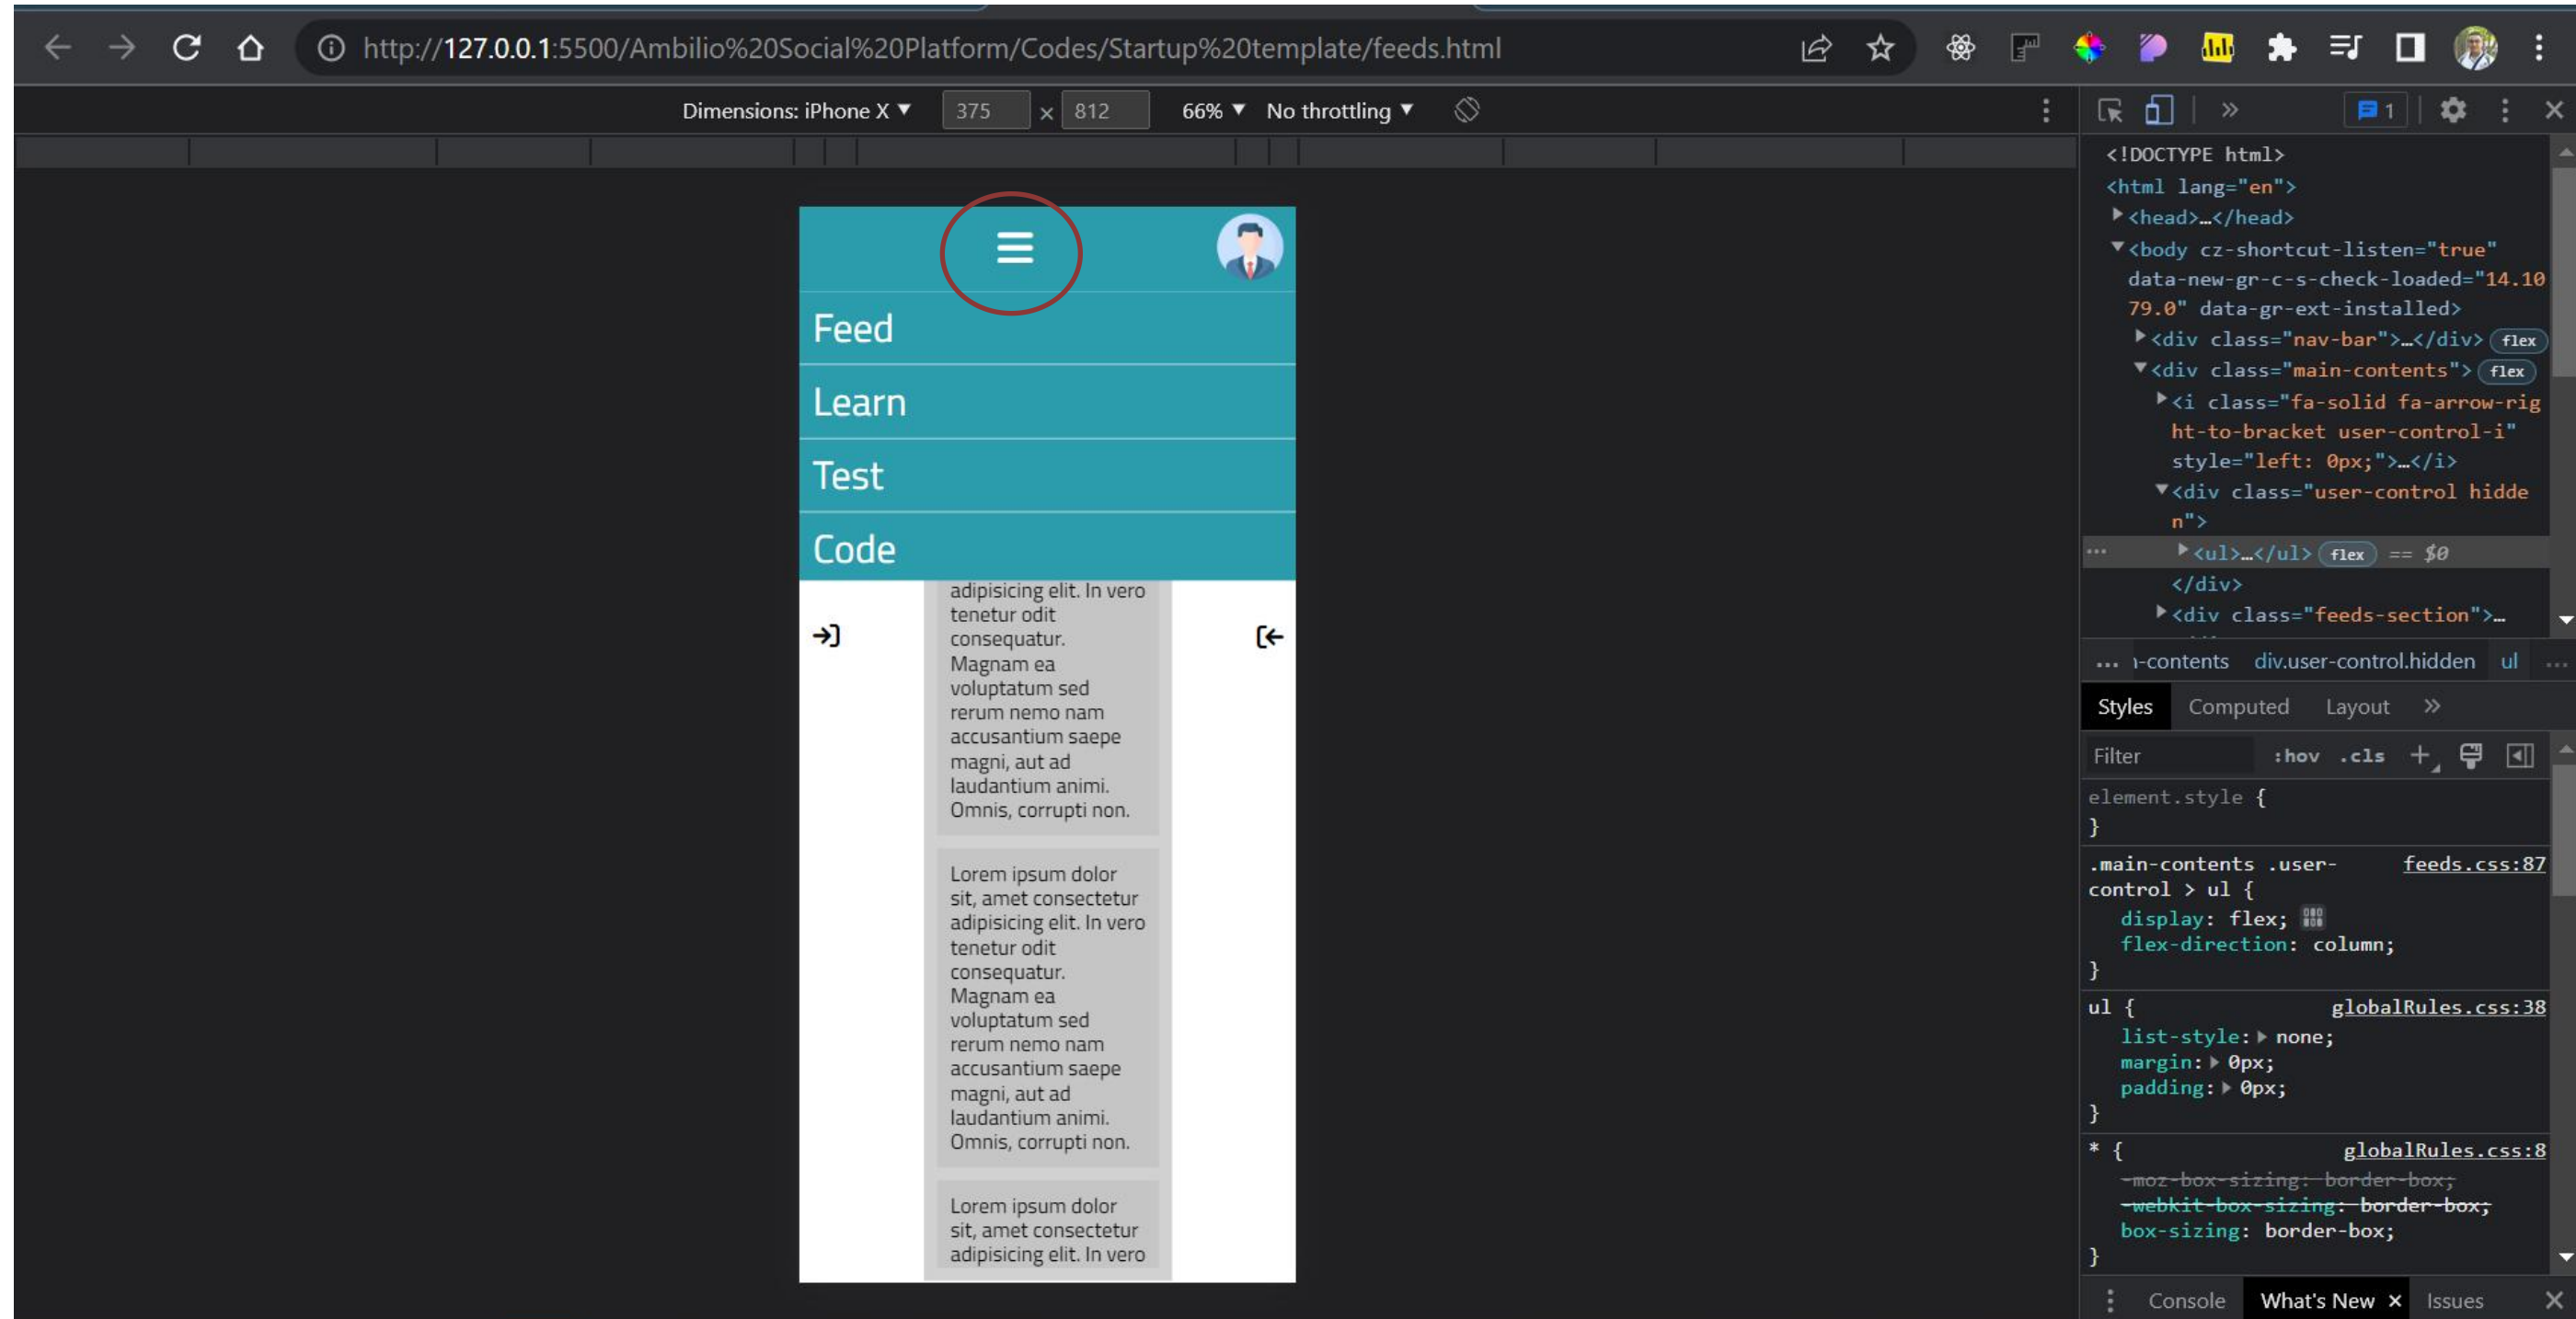

If the Recommended panel is not hidden :

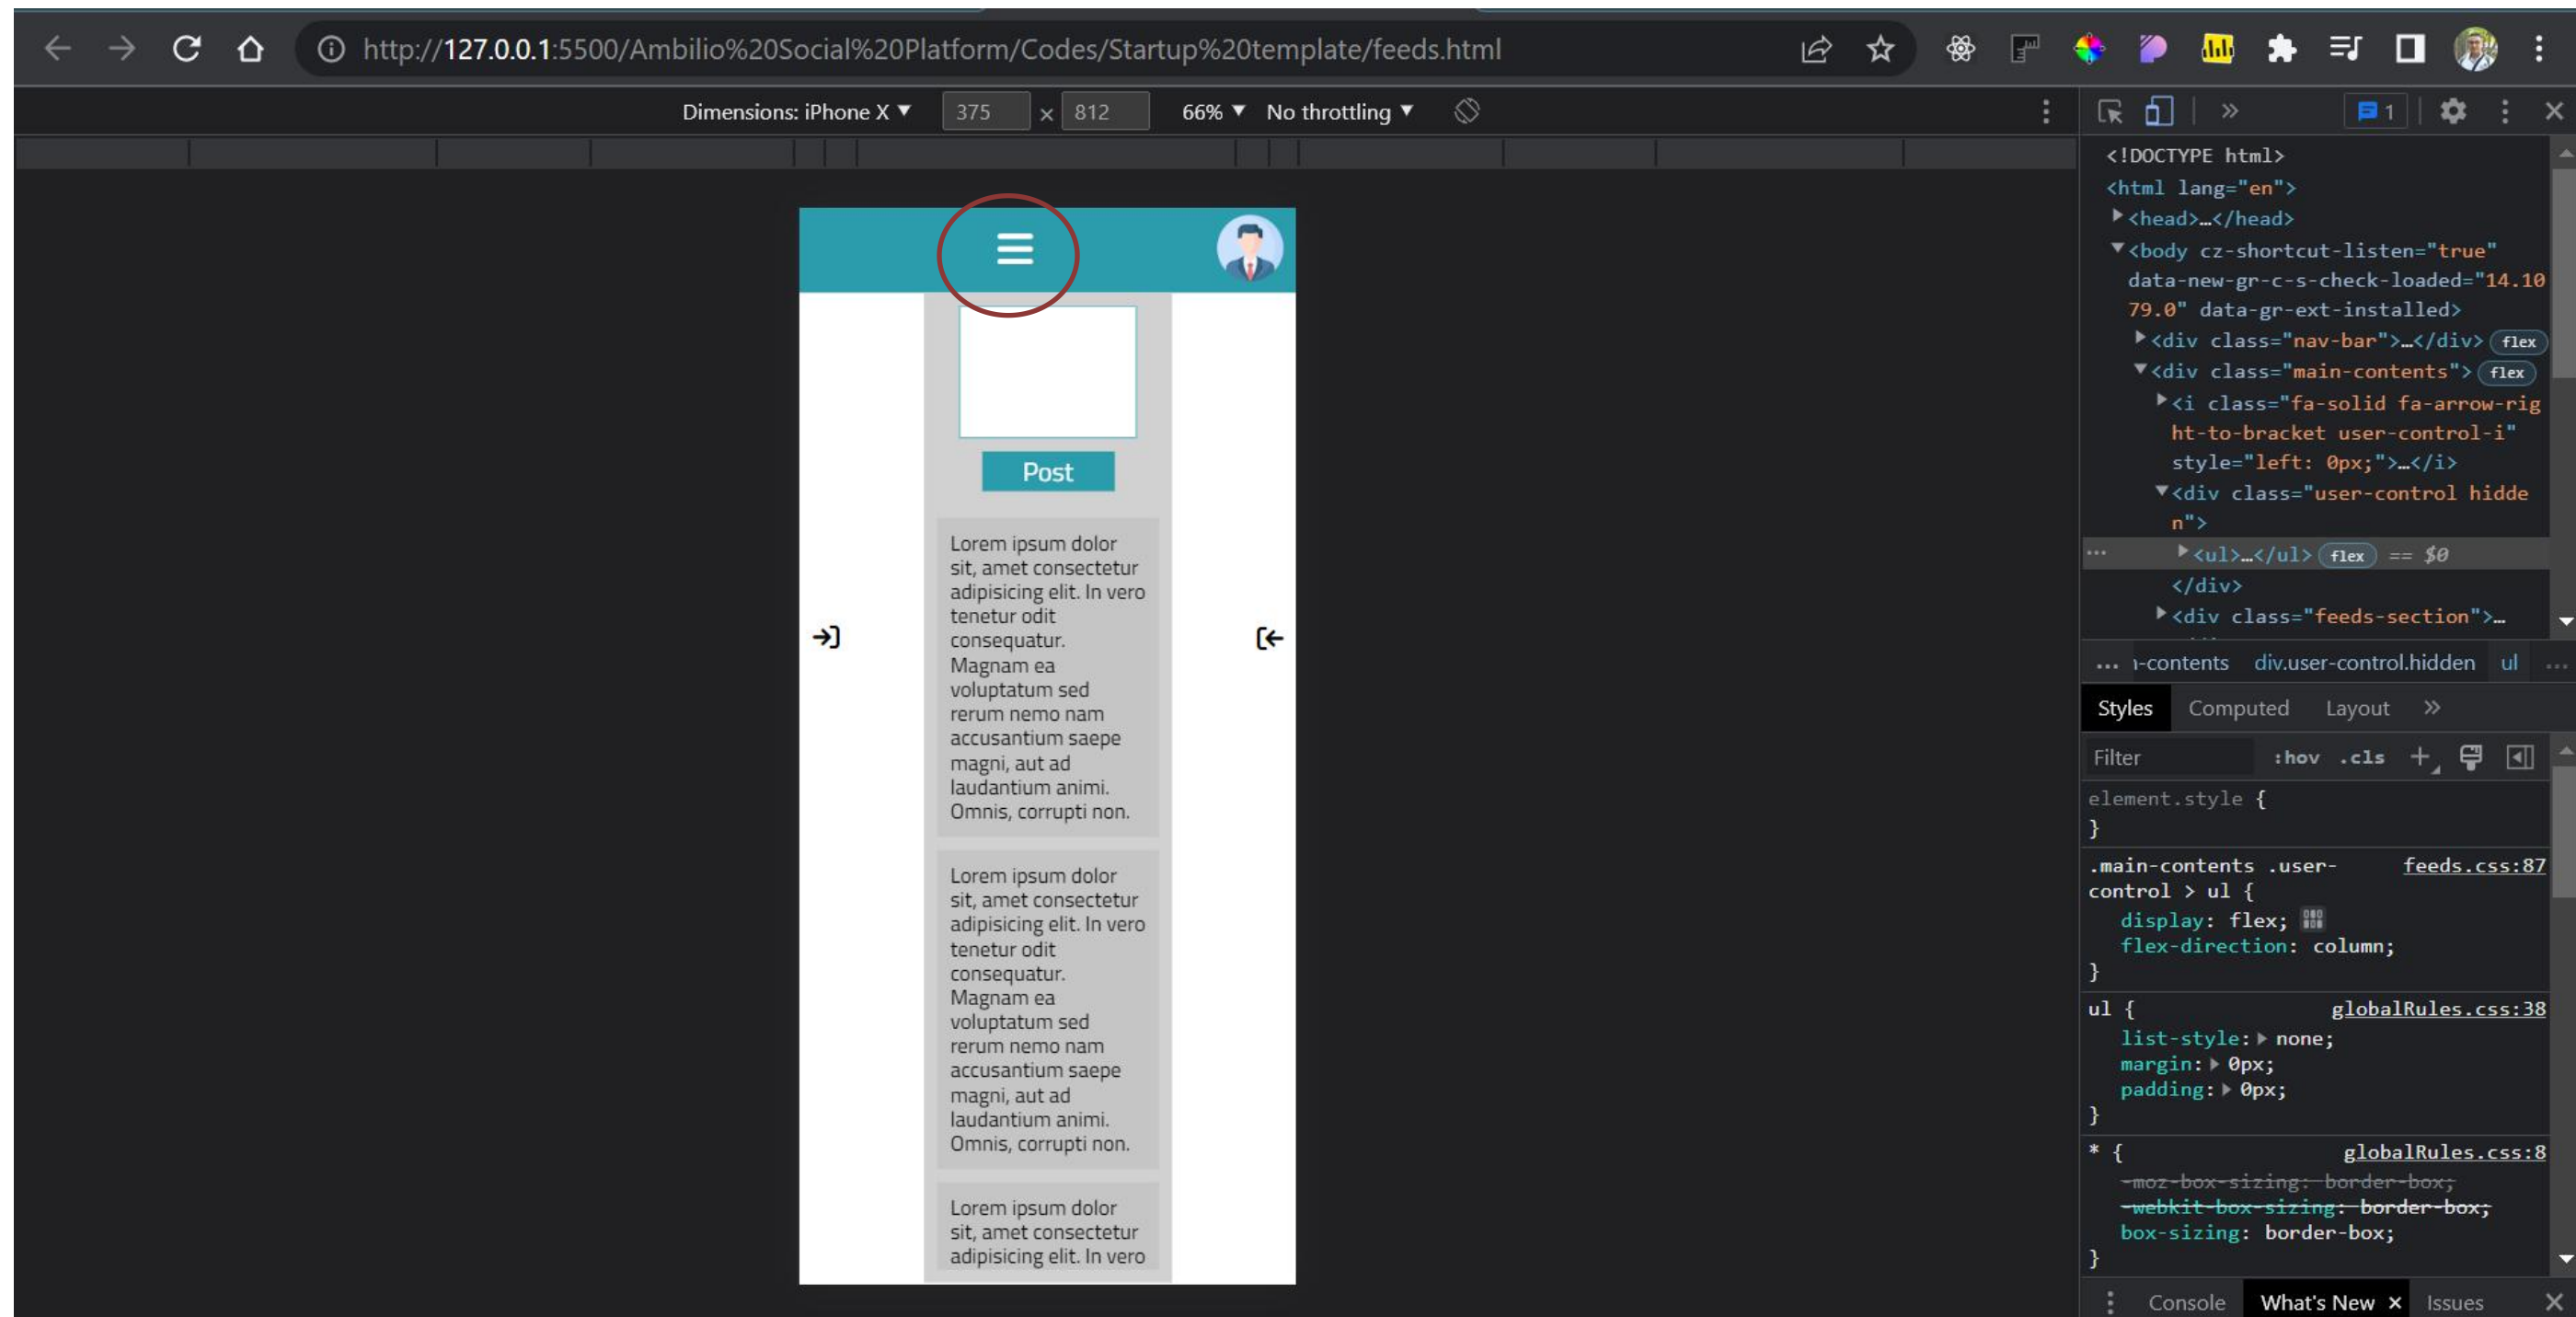

3-On click on the Nav-bar Icon :

If the nav-bar options are hidden :

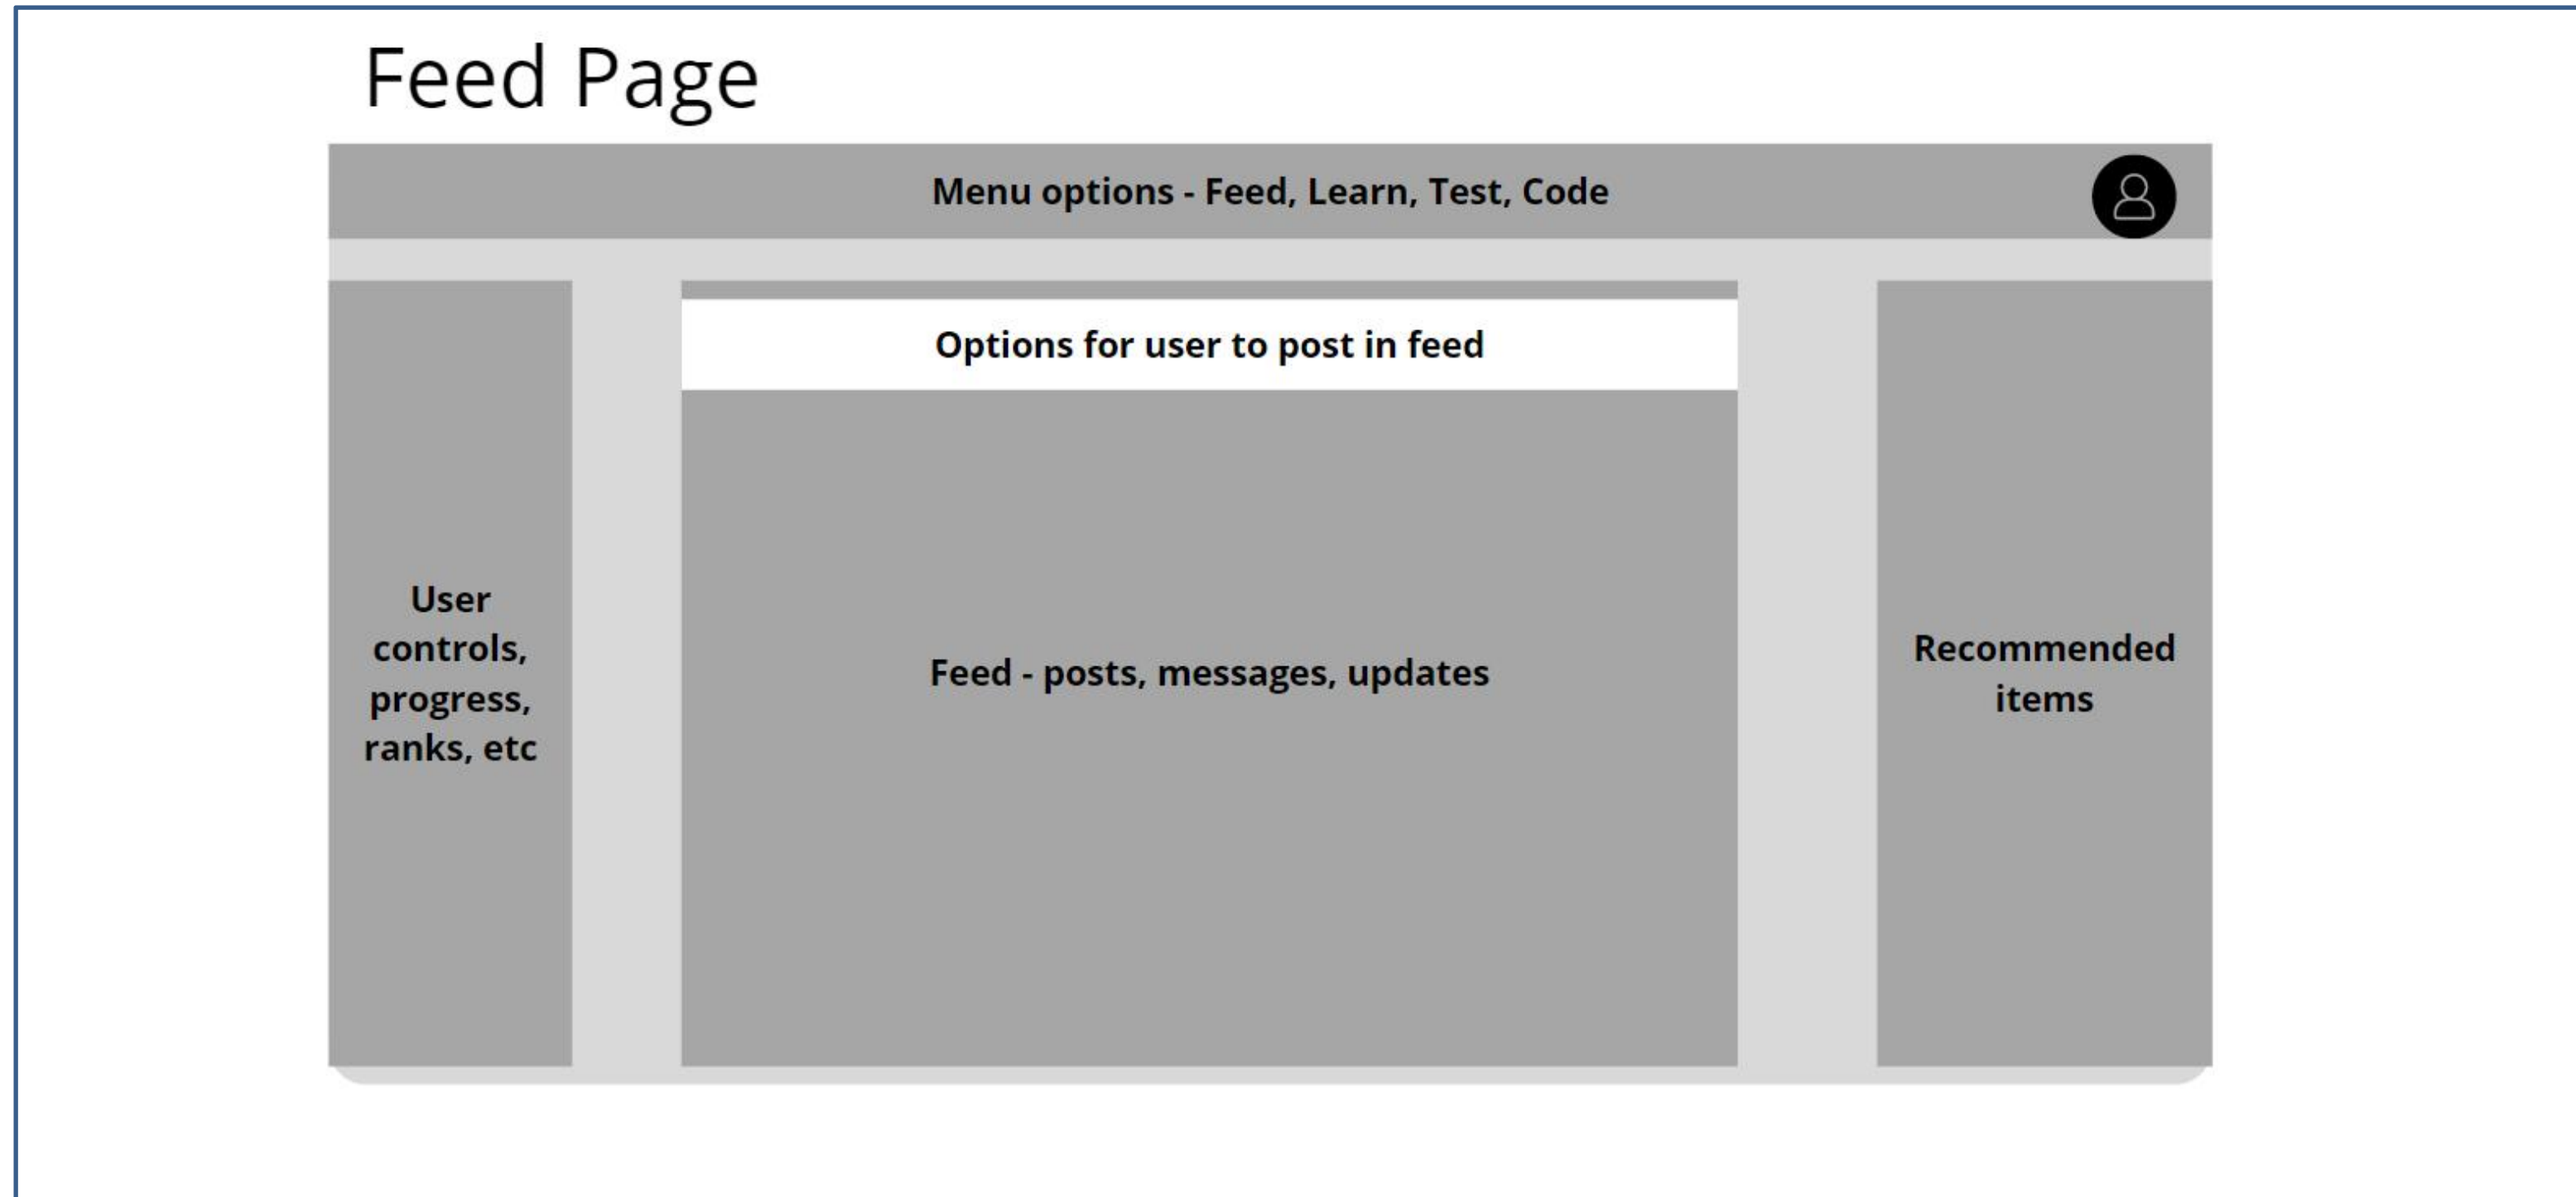

If the nav-bar options are not hidden :

1-Note about feeds section : The post, author name, author avatar, Date of post ...etc should come from the database (This is just a prototype and static UI to clarify how Feeds page should look like.)

2-Note about Recommended Items section : The recommended Items are the production of ML module which is linked to the database (The Items which appear on this prototype UI is static just to clarify how Feeds page should look like.)

Prototype sketch for feeds page :

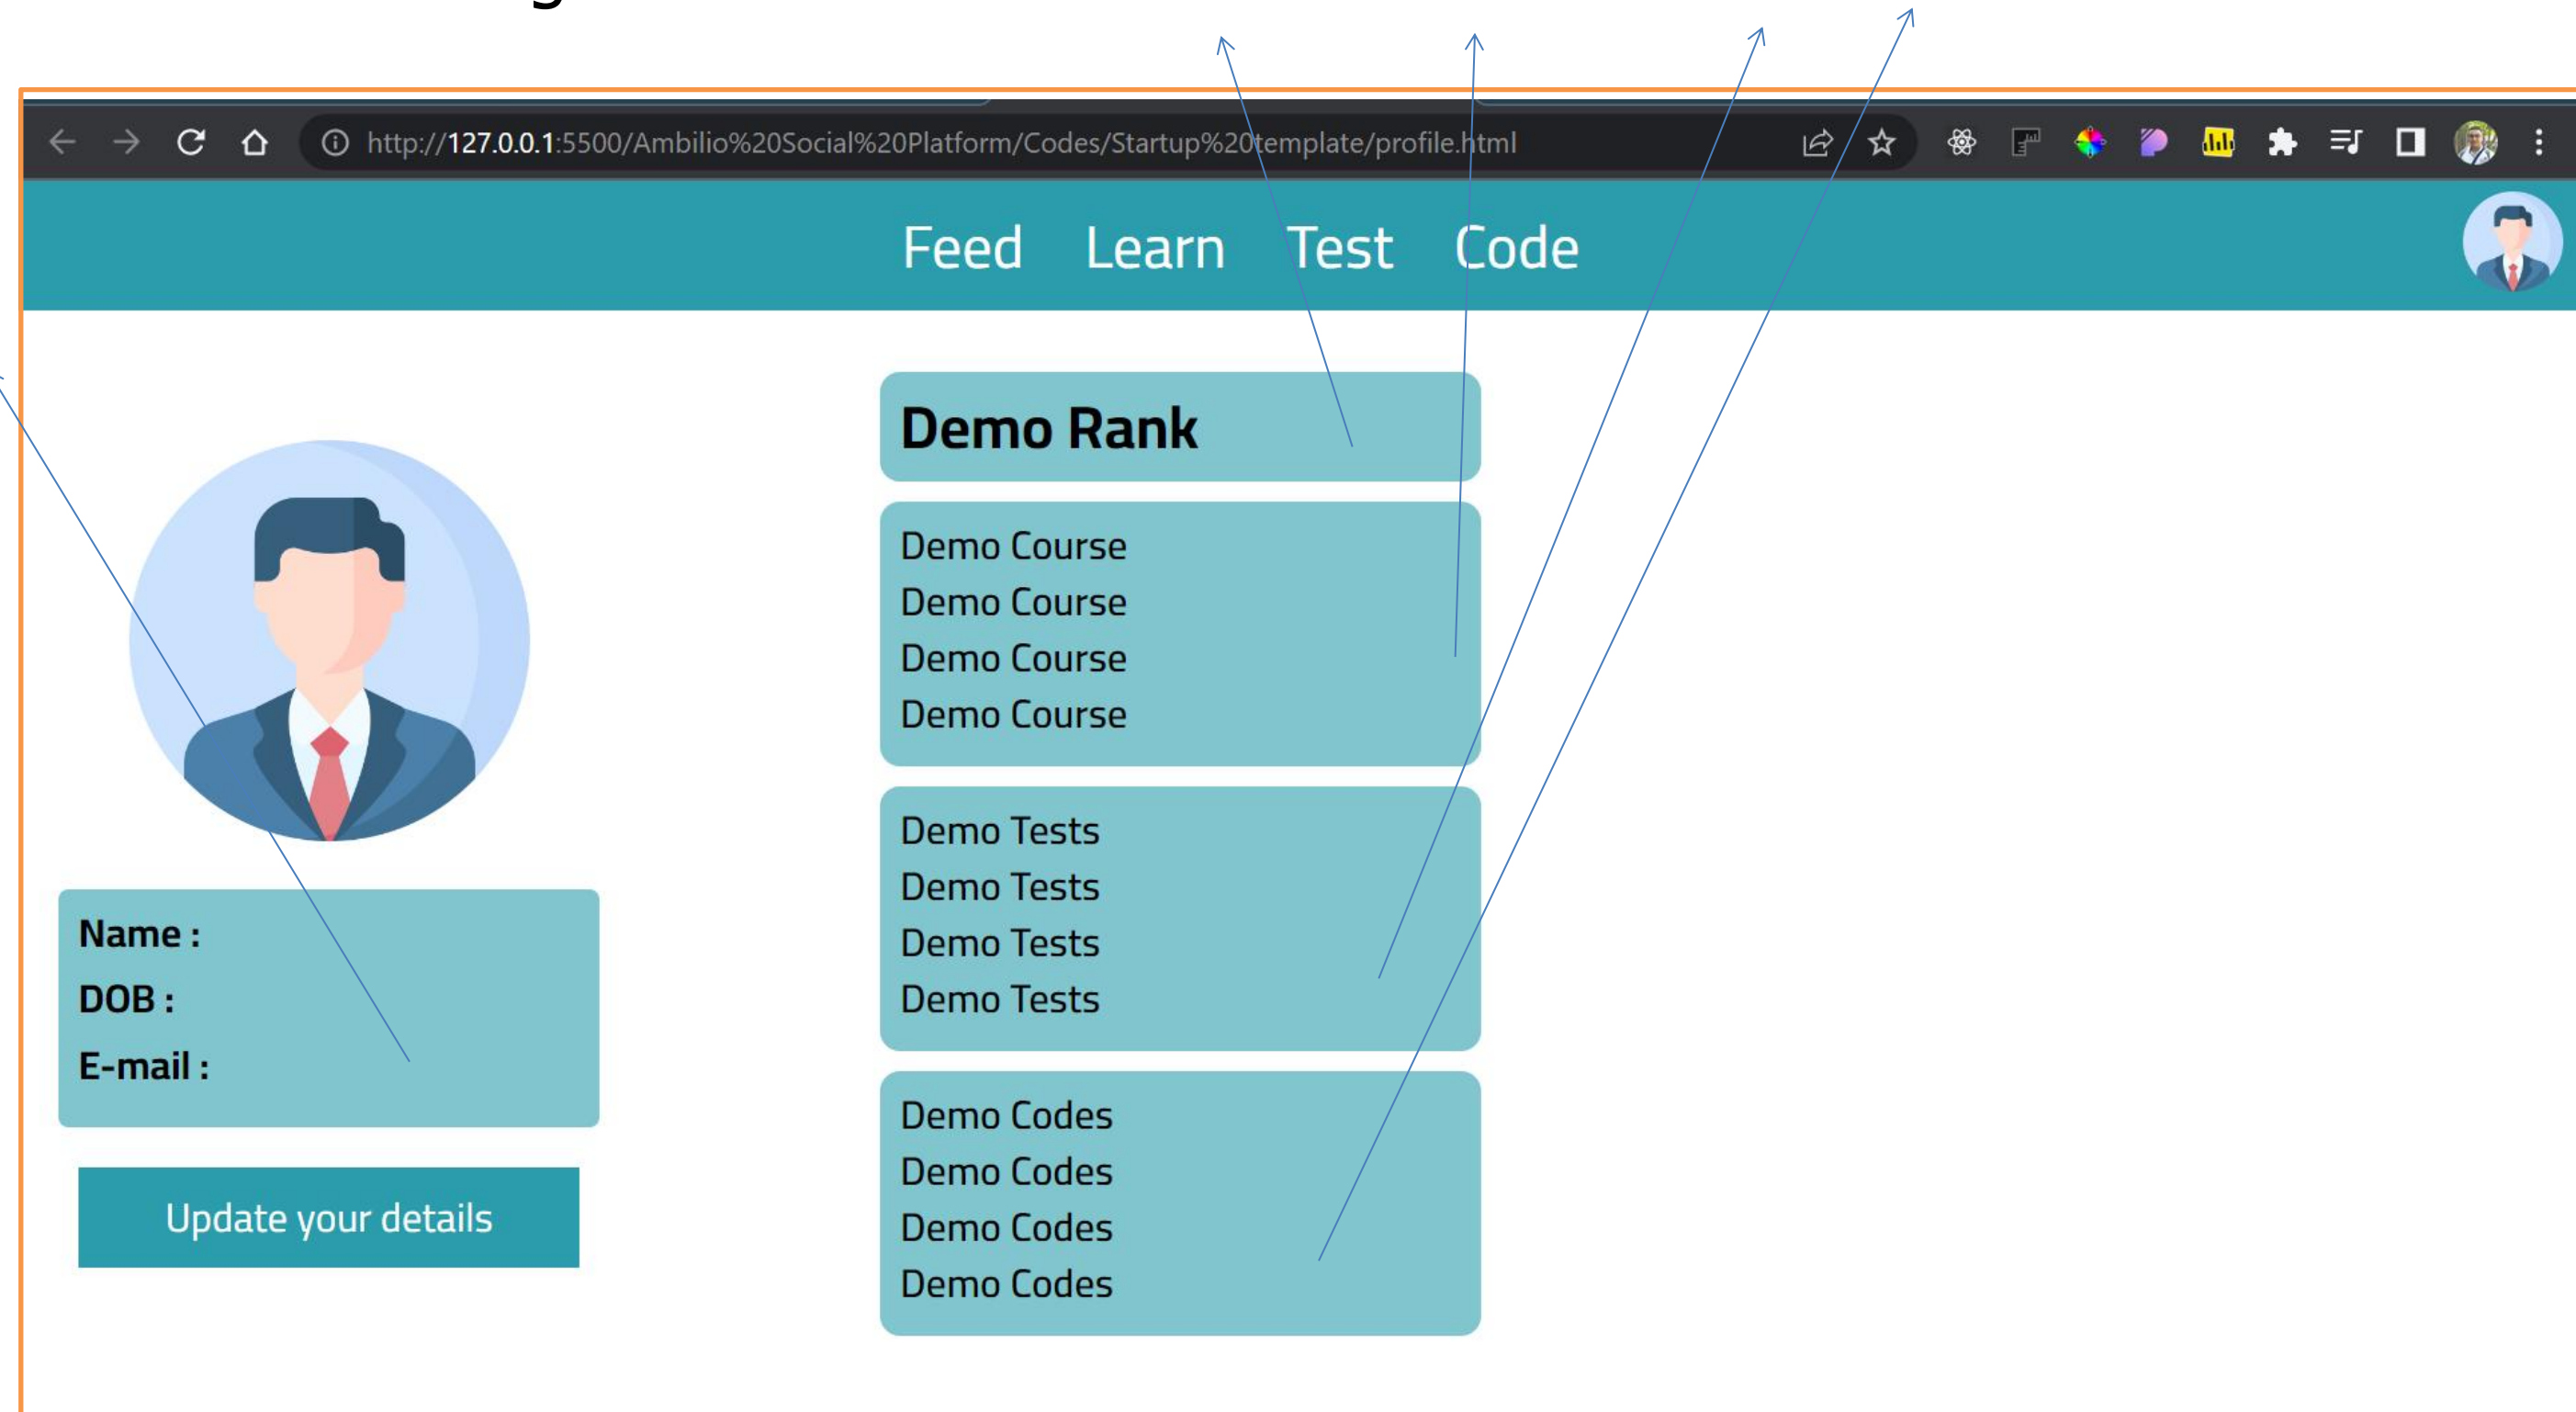

Should come from the database
depending on user entered details

4-Profile Page :

Overview on large screens :

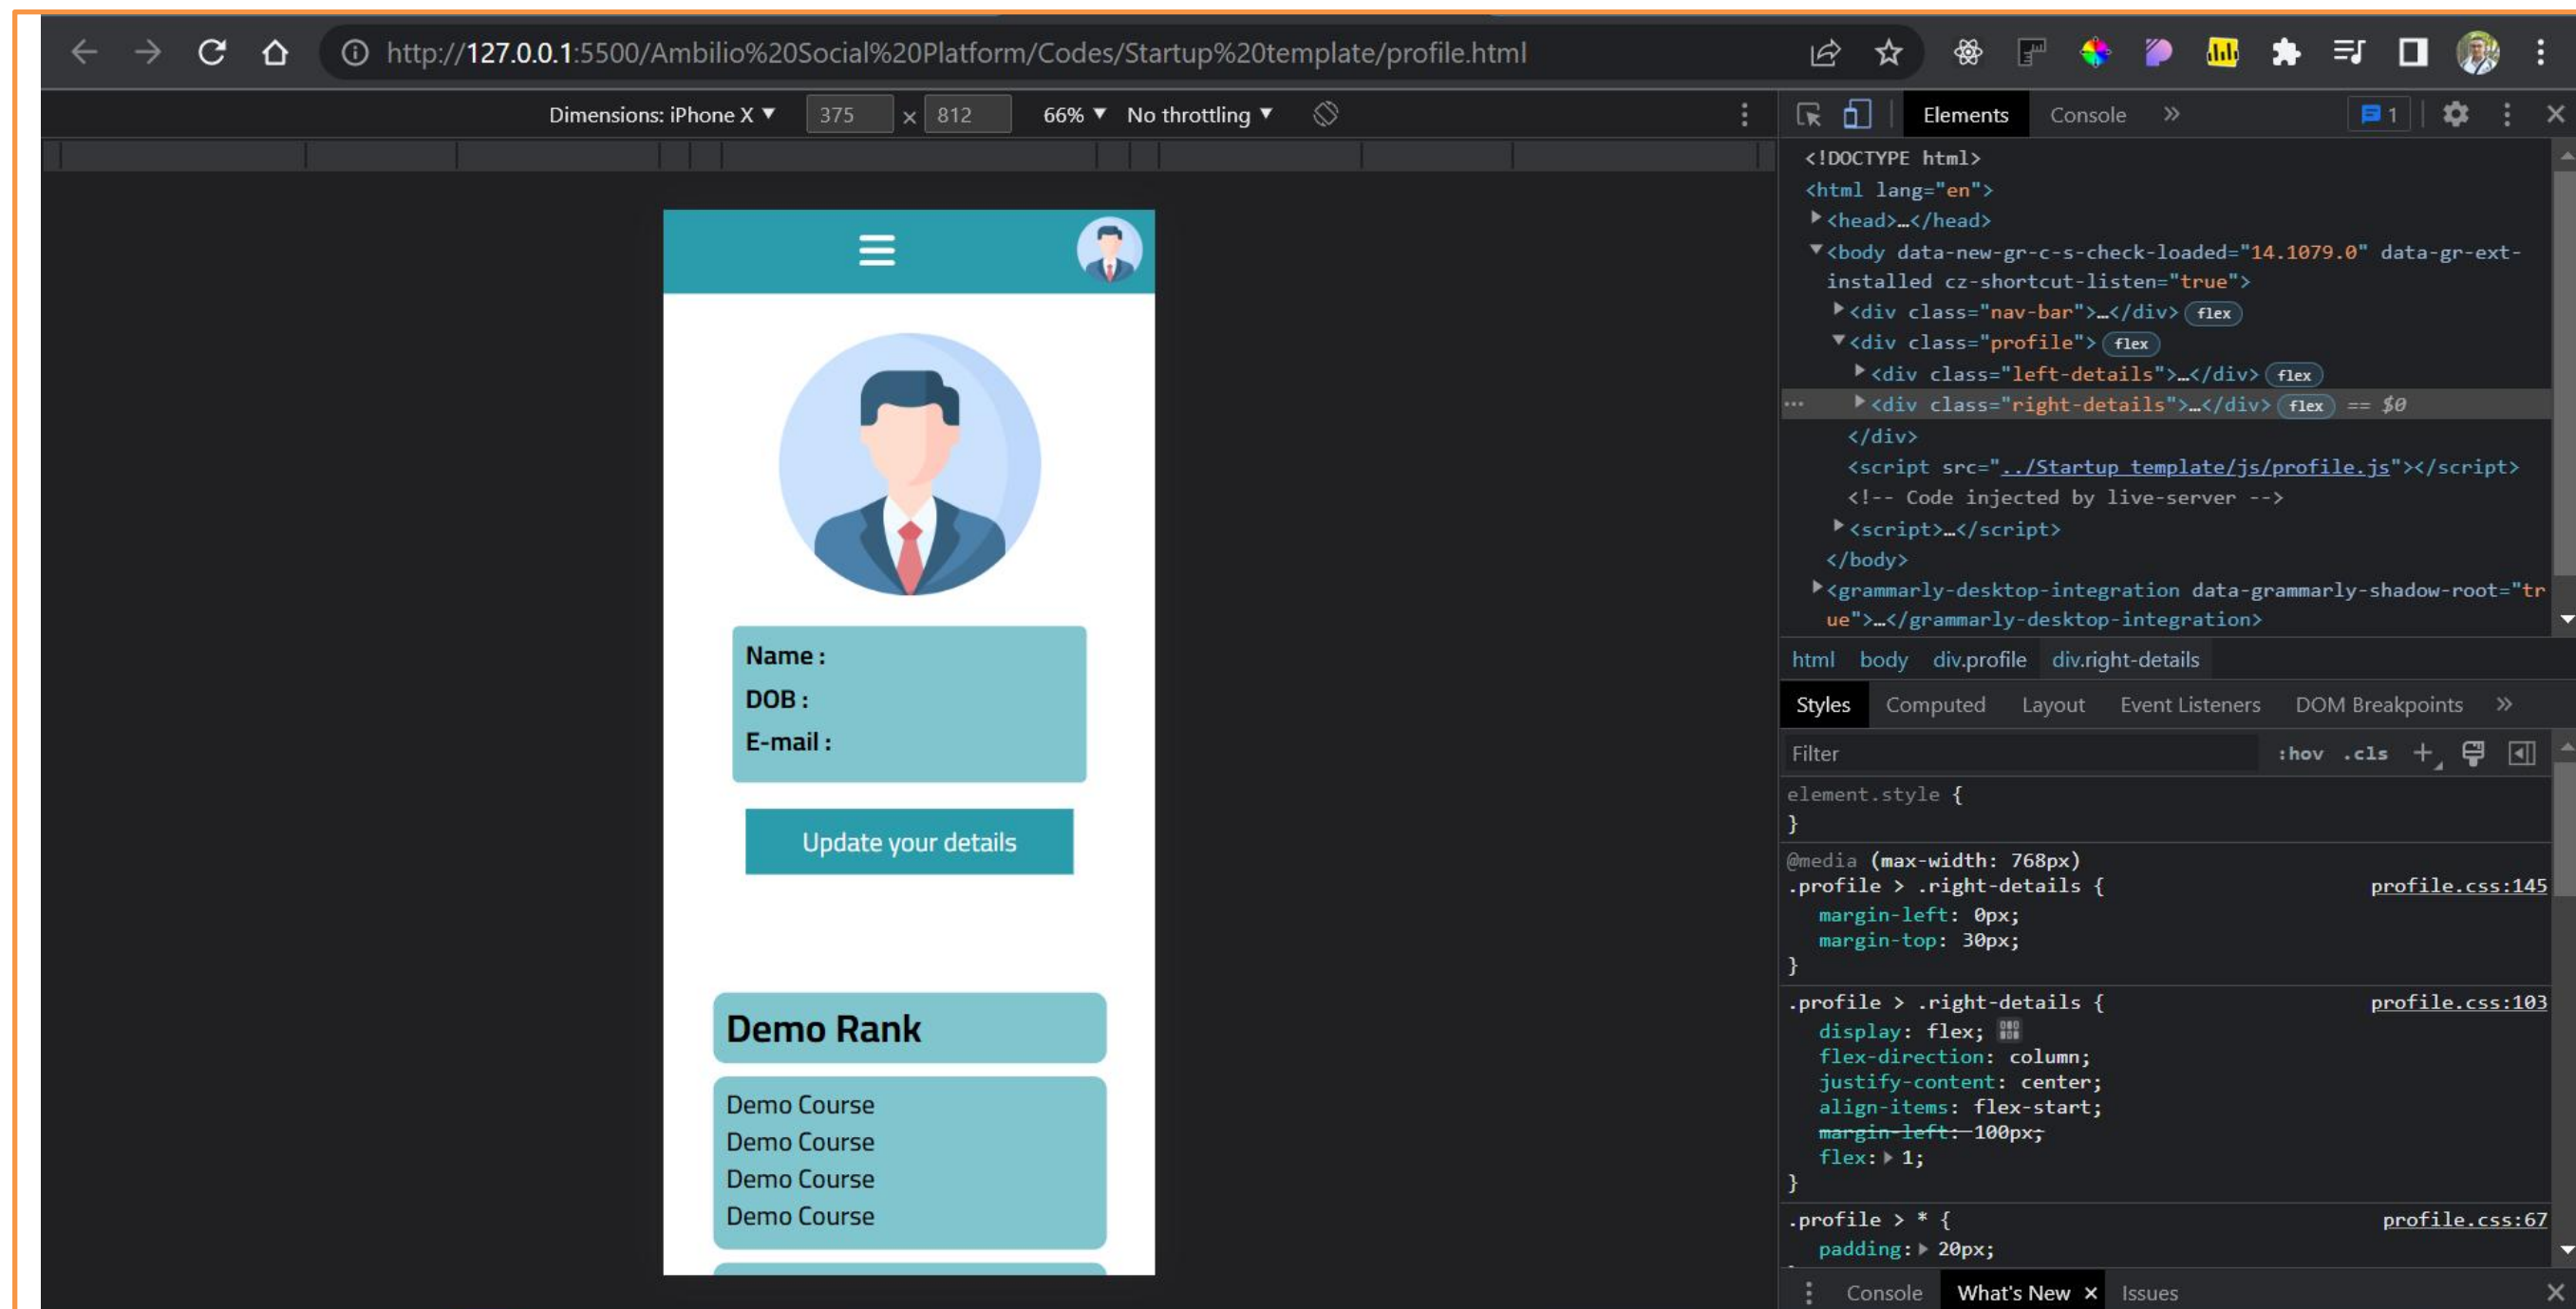

Should come from the
database depending on user
status

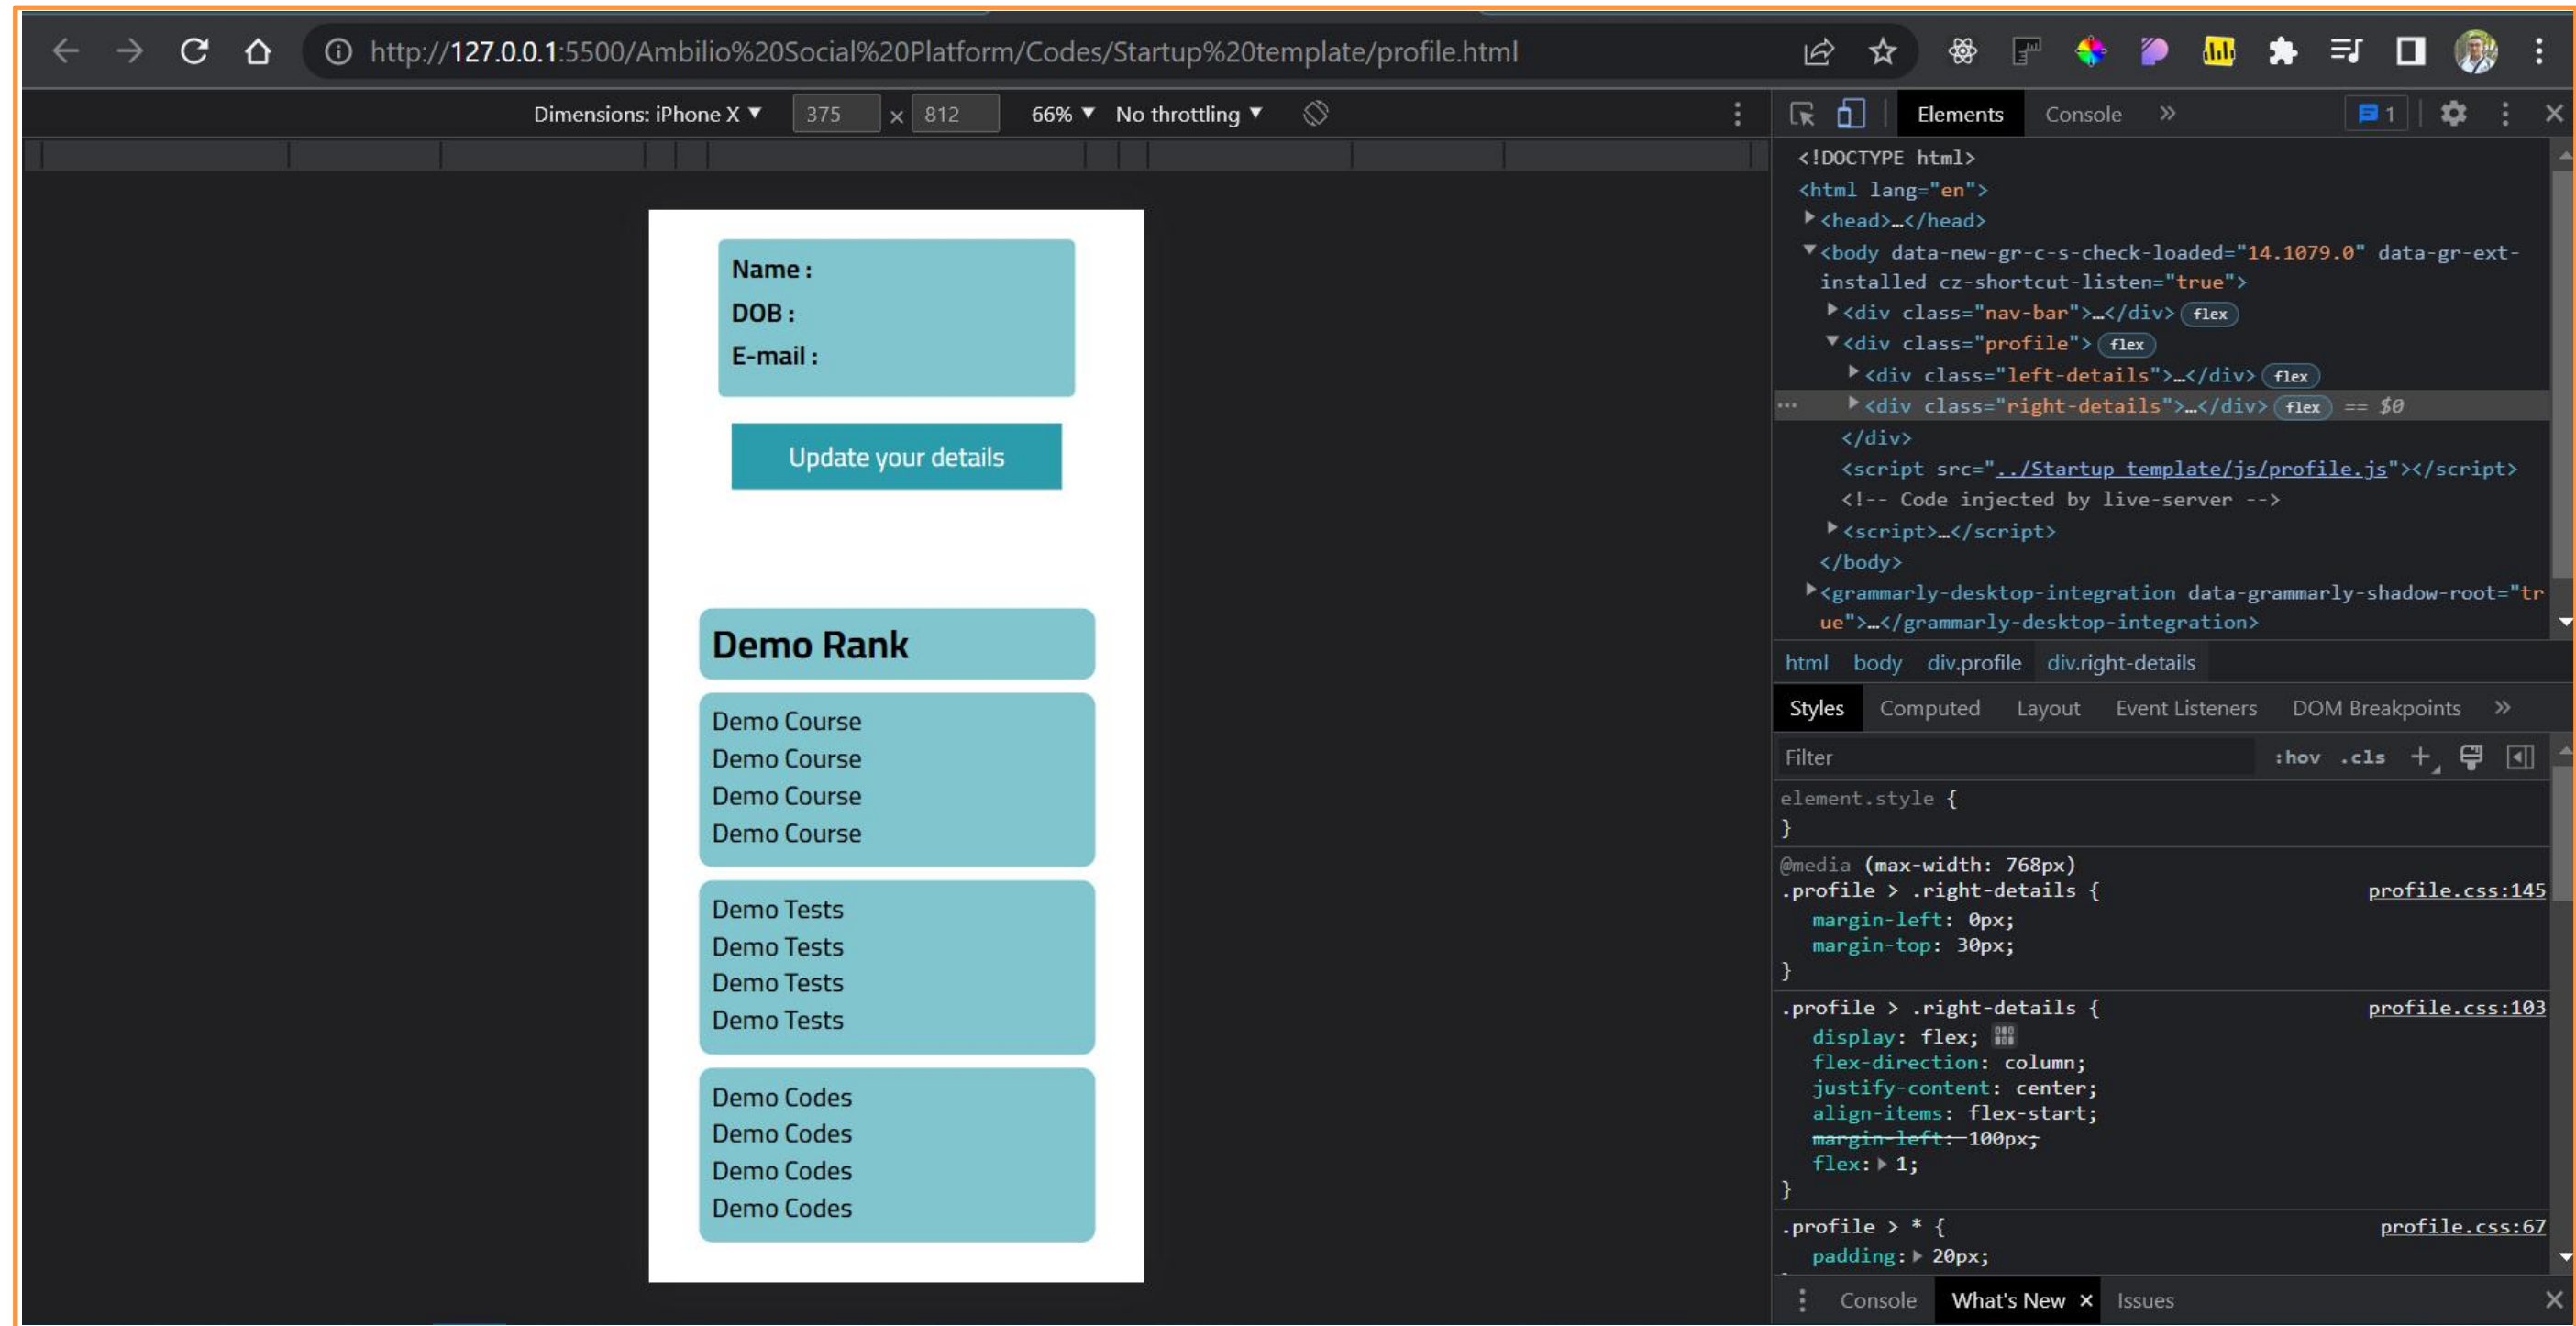

Overview on small screens :

For Example Iphone X :

1)

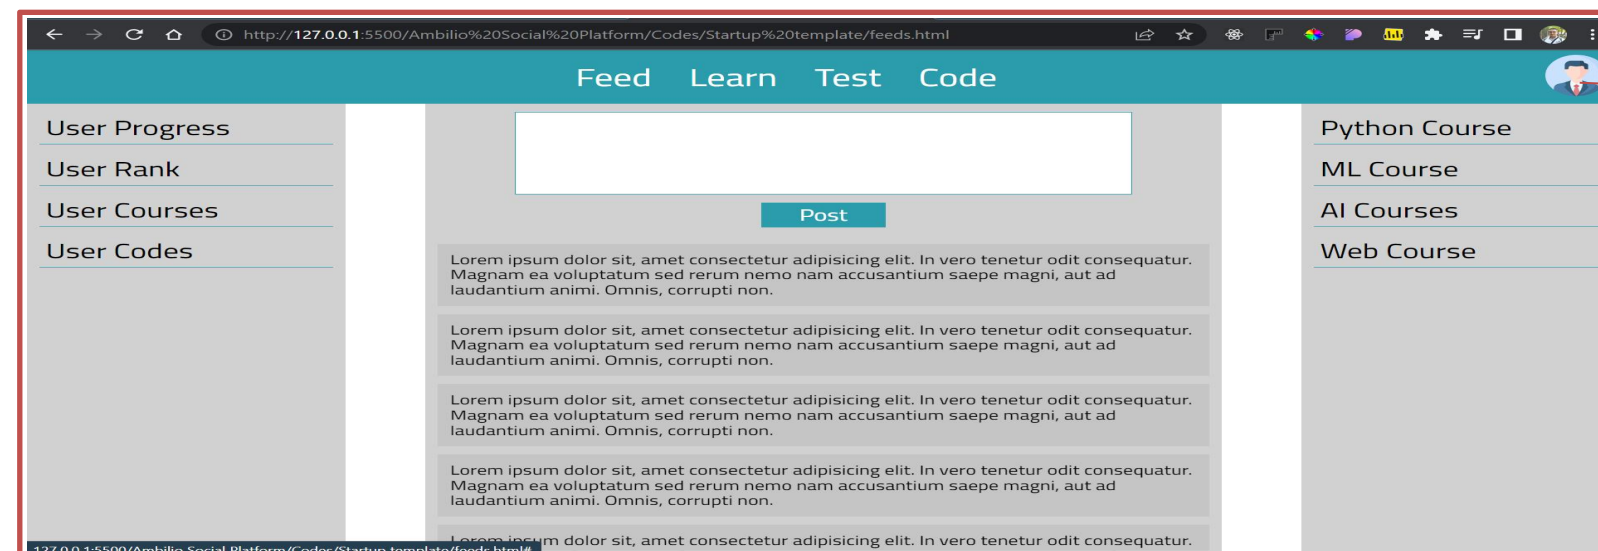

2)

New feature added during this development stage:

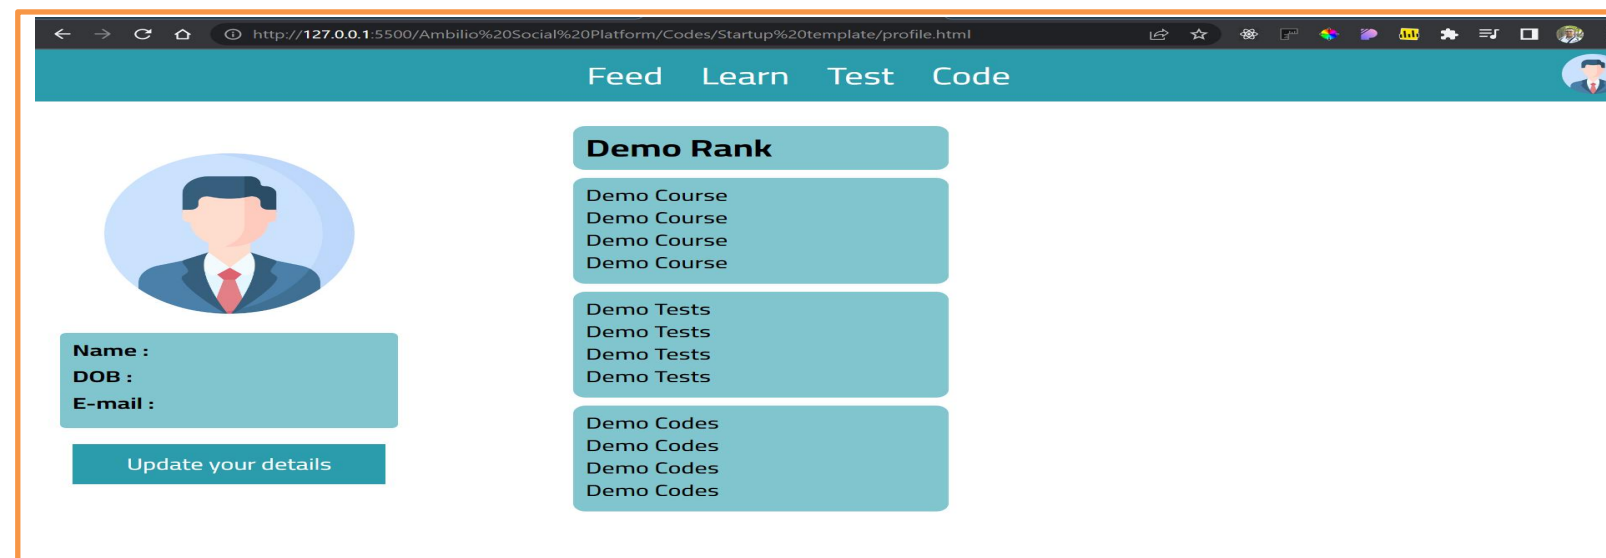

1-Linked pages : Feed page ==> profile page :

On click on the profile photo in the top bar in feed page the browser will redirect the user to his profile page :

On click

Redirecting to :

JavaScript functionality in profile page :

Only Nav-bar logic which every page in the website contain this logic since the Nav-bar component is a main component of user movement.

1-Note about profile page : The major details, User rank, Course taken, Codes taken ...etc should come from the database (This is just a prototype and static UI to clarify how Feeds page should look like for the back-end developer.)

Prototype sketch for profile page :

User Account Page

Menu options - Feed, Learn, Test, Code

Major details of
user

Update details

Global rank

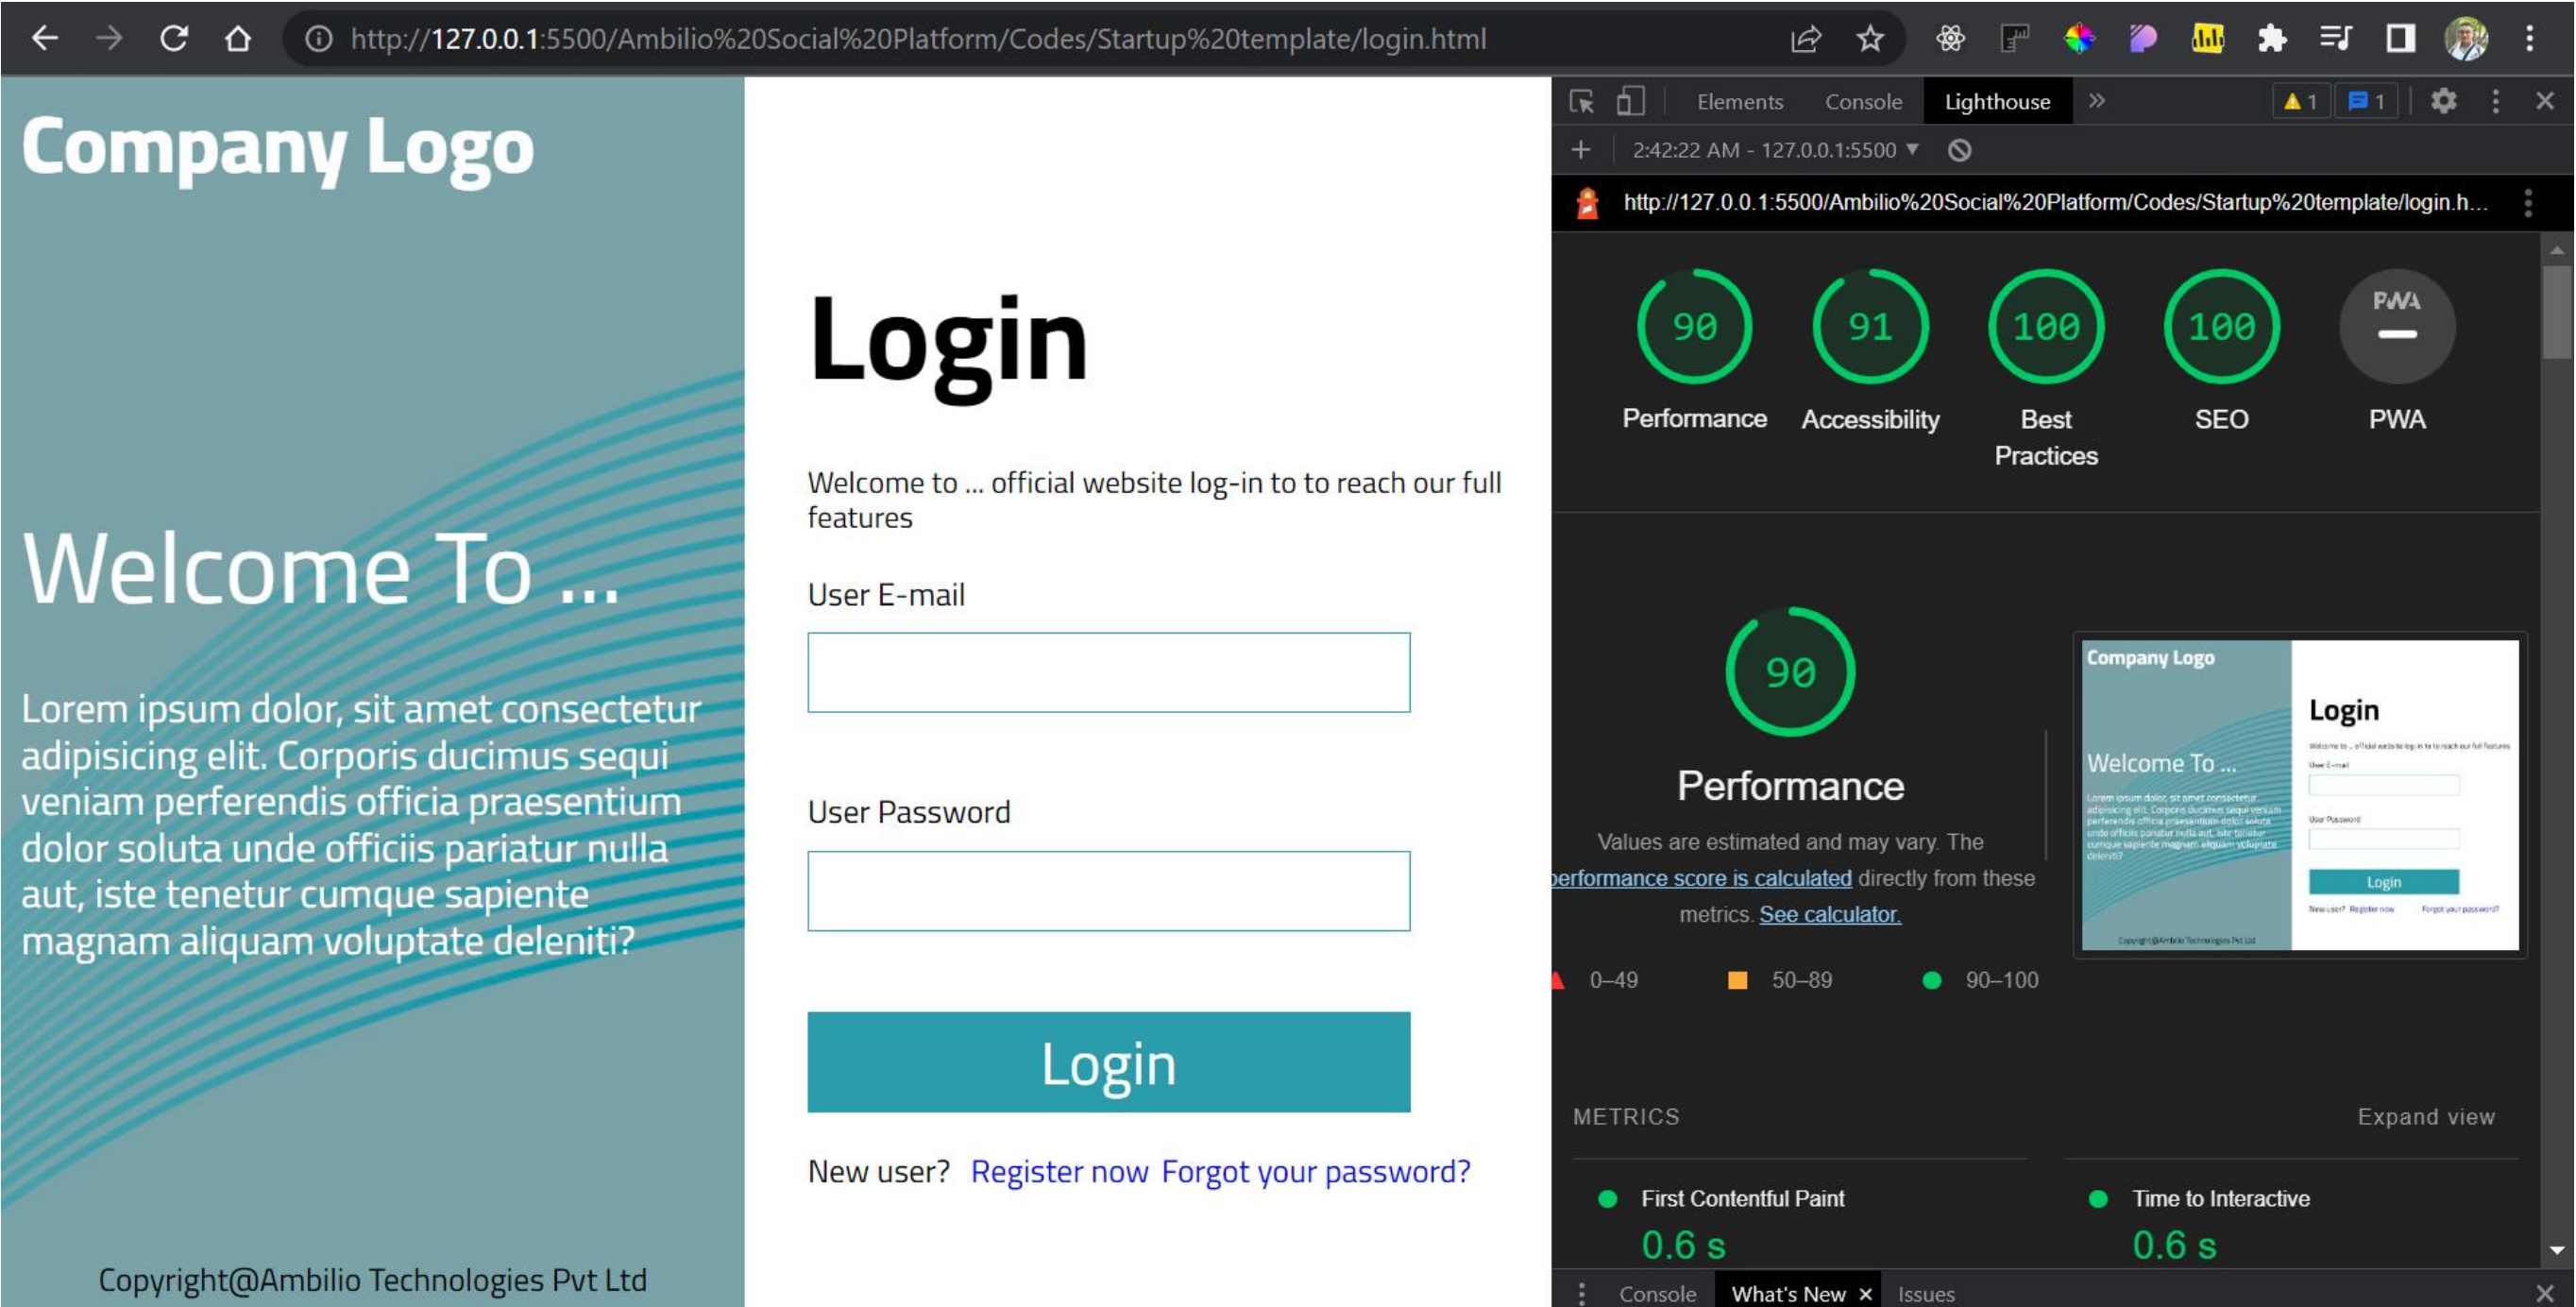

Courses taken

Tests taken

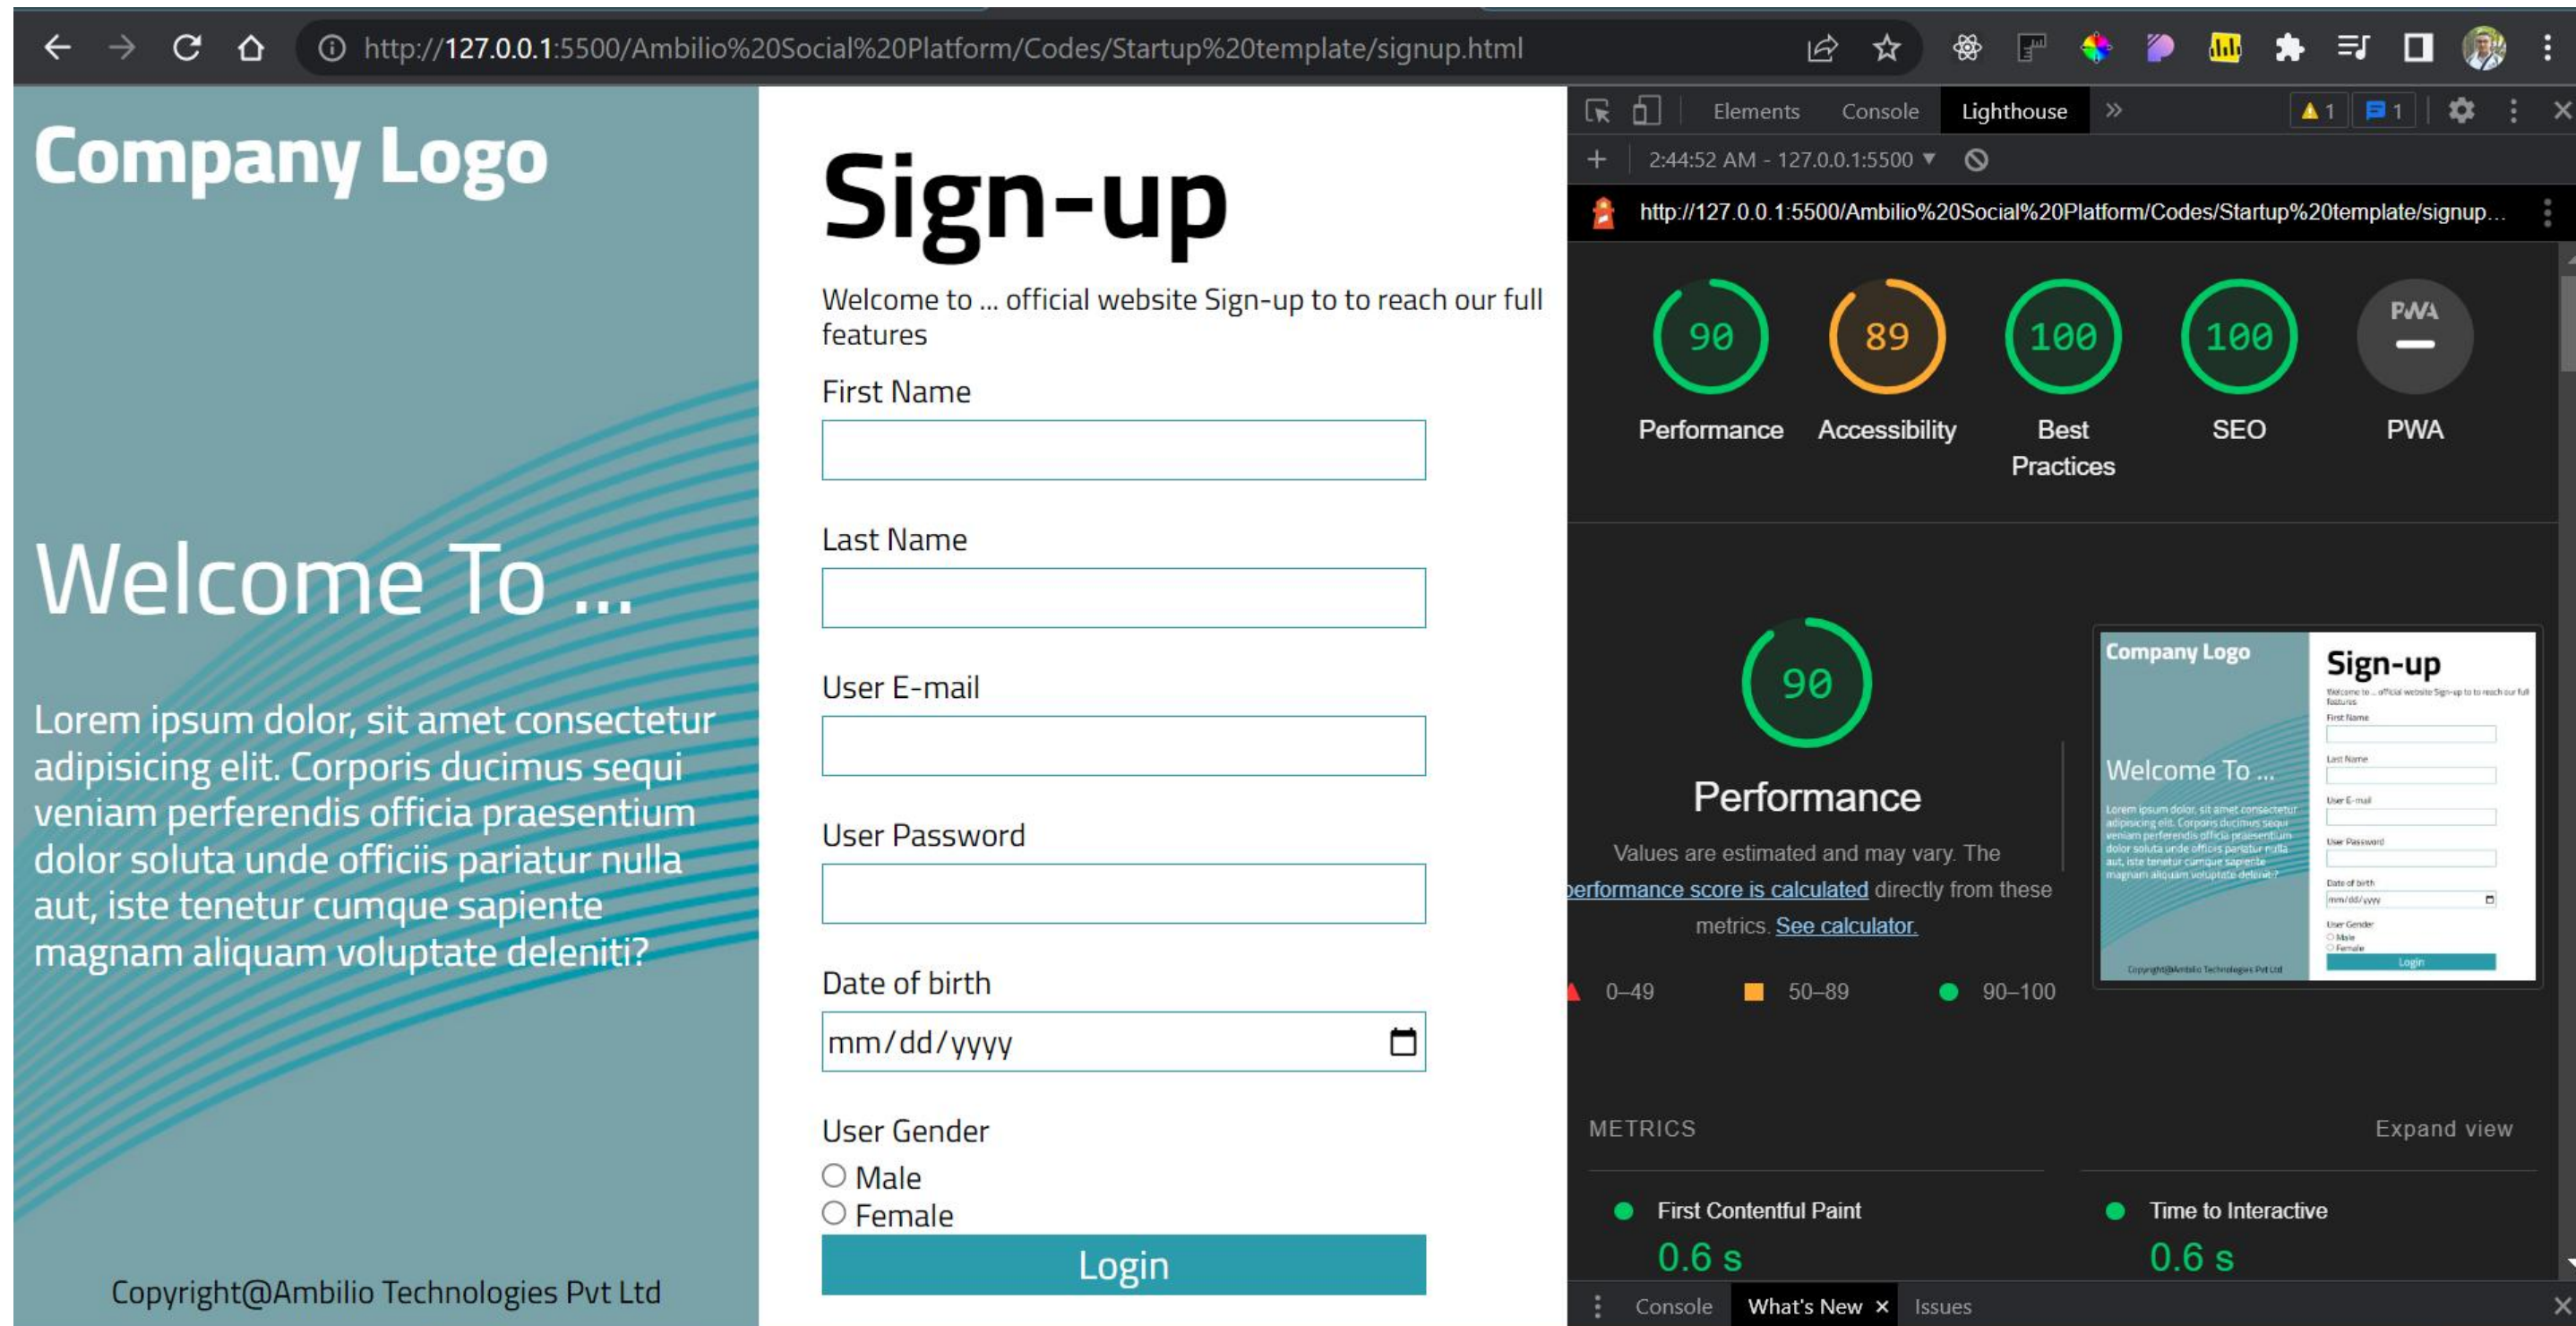

Codes taken

Light house extension report :

1-Log-in page :

2-Sign-up page :

3-Feeds page :
